

Actuarial Committee

Meeting Agenda

| Date | Time | Location | Staff Contact |
|----------------|---------|-------------------------|-------------------|
| April 14, 2022 | 9:00 AM | Microsoft Teams Webinar | David M. Bellusci |

1901 Harrison Street, 17th Floor • Oakland, CA 94612 • 415.777.0777 • Fax 415.778.7007 • www.wcirb.com • wcirb@wcirb.com

Released: April 7, 2022

To Members of the Actuarial Committee, WCIRB Members and All Interested Parties:

This meeting is Open to the Public.

Please use this <u>link</u> to register for the meeting webinar. After registering, you will receive a confirmation email containing information about the meeting.

I. Approval of Minutes

None

II. Working Group Meeting Summaries

A. Medical Analytics Working Group Meeting Held on April 1, 2022

III. Unfinished Business

- A. AC16-06-05: Update on Medical Severity Trends by Component
- B. AC22-03-01: First Quarter 2022 Review of Diagnostics
- C. AC22-03-02: 12/31/2021 Experience Review

IV. New Business

- A. AC22-04-01: 9/1/2022 Filing Loss Adjustment Expense Experience Review
- B. AC22-04-02: 9/1/2022 Filing Review of Alternative Loss Projection Methodologies
- C. AC22-04-03: 9/1/2022 Filing COVID-19 Claim Cost Projection
- D. AC22-04-04: Retrospective Evaluation of 2021 Fee Schedule Changes

V. Matters Arising at Time of Meeting

VI. Next Meeting Date: June 28, 2022

VII. Adjournment

Antitrust Notice

As members of the Workers' Compensation Insurance Rating Bureau of California (WCIRB), you are bound, when involved in meetings, presentations or other activities of the WCIRB, to limit your actions (as well as discussions and virtual chats, other than social ones) to matters relating to the business of the WCIRB. Matters that do not relate directly to WCIRB business should be avoided. Members should particularly avoid discussions, chats or conduct that could be construed as intended to affect competition (or access to markets). Thus, as members, you should not discuss or pursue the business interests of individual insurers or others, including, in particular, the plans of individual members involving, or the possibility or desirability of (a) raising, lowering, or stabilizing prices (premiums or commissions); (b) doing business or refusing to do business with particular, or classes of, insurers, reinsurers, agents, brokers, or insureds, or in particular locales; or (c) potential actions that would affect the availability of products or service either generally or in specific markets or locales.

Notice

The information in this Agenda was developed by the Workers' Compensation Insurance Rating Bureau of California (WCIRB) for the purpose of assisting the WCIRB Actuarial Committee. The WCIRB cannot make any guarantees if this information is used for any other purpose and the WCIRB shall not be liable for any damages, of any kind, whether direct, indirect, incidental, punitive or consequential, arising from the use of or reliance upon this information for any other purpose.

Medical Analytics Working Group

Meeting Summary

To: Participants of the Medical Analytics Working Group

Date: April 7, 2022

RE: Summary of April 1, 2022 Meeting

Discussion Topics

At the meeting, the following topics were discussed.

1. Update on Medical Severity Trends by Component

Staff summarized the update to the WCIRB's medical severity trend analysis using medical transaction data through December 31, 2021 with COVID-19 claims excluded.

Staff noted that the average medical severity per claim increased by 6% in 2021, partly due to the 2021 fee schedule changes to the Evaluation and Management (E/M) office visit codes and medical-legal services codes and values. Staff noted that the pharmaceutical paid per claim increased temporarily in 2020 but declined by 10% in 2021. Staff also observed that the usage of telemedicine services appeared to level off in 2021 after the significant increase in 2020. A Working Group member suggested exploring the potential differences in the mix of telemedicine services provided after 2020 to that provided in 2020. Staff agreed to explore these potential differences in the telemedicine study planned for later this year.

2. Retrospective Evaluation of the 2021 Fee Schedule Changes

Staff presented the preliminary findings of the retrospective evaluation of the cost impact of the 2021 changes to the E/M section of the Official Medical Fee Schedule (OMFS) and Medical-Legal Fee Schedule based on actual post-schedule change payments in the WCIRB medical transaction data. With respect to the cost impact of the E/M schedule changes, the evaluation indicated a 10% net of inflation cost increase for the nine office/outpatient visit service codes in 2021 compared to 2019. It was noted that this compares to a 15% estimate in the WCIRB's initial prospective evaluation of the schedule change reflected in the September 1, 2021 Pure Premium Rate Filing. The Working Group generally concurred with the approach used in the evaluation.

A Working Group member suggested reviewing potential service mix differences between telehealth and non-telehealth E/M services especially for office visit codes (99212-99215) that had a significant increase in the reimbursement allowance in 2021. Staff explored this after the meeting and found that the service mix in 2021 is generally similar between telehealth and non-telehealth services for the E/M codes 99212-99215 (Table 1). A Working Group member inquired about regional differences and potential shifts in the distribution of the nine office visit codes from 2019 to 2021. Staff agreed to further explore this issue.

Meeting Summary

Date: April 7, 2022

Table 1. Share of Telehealth and Non-Telehealth E/M Transactions by E/M Office Visit Codes in 2021

| E/M Code | Description | Share of Telehealth E/M Services ¹ | Share of Non-Telehealth E/M Services |
|-----------------------|------------------------------|--|---|
| 99202 | New sf 15-29 min | 0% | 1% |
| 99203 | New low 30-44 min | 3% | 7% |
| 99204 | New mod 45-59 min | 1% | 8% |
| 99205 | New hi 60-74 min | 1% | 2% |
| 99211 | Established minimal prob | 0% | 0% |
| 99212 | Established sf 10- 19 min | 5% | 3% |
| 99213 | Established low 20-29 min | 39% | 35% |
| 99214 | Established mod 30-39 min | 37% | 31% |
| 99215 | Established hi 40- 54 min | 6% | 4% |
| 99202-992 Combined | 215 (Nine Codes I) | 93% | 91% |

Staff next summarized the retrospective evaluation of the April 1, 2021 Medical-Legal Fee Schedule. The evaluation indicated a 39% cost increase for medical-legal services in 2021 compared to 2019, as compared to 22% in the WCIRB's prospective evaluation reflected in the September 1, 2021 Pure Premium Rate Filing. Staff noted that the extra charges for record review appears to be a key cost driver, which accounted for 25% of 2021 medical-legal payments.

Staff noted that while the overall average number of medical-legal services per claim remained the same in 2021 as in 2019, the number of follow-up evaluations per claim increased but the number of comprehensive and supplemental evaluations per claim both declined in 2021. A Working Group member suggested that the potential reason for the decline may be the change in the timeframe (extended to 18 months from the previous 9 months before April 2021) allowed for a follow-up evaluation after an initial medical-legal evaluation in the new fee schedule. Staff agreed to explore the timing of follow-up evaluations in the data.

Staff noted that the cost impact of psychologist/psychiatrist modifiers was lower than initially projected, as the average payments for medical-legal evaluations completed by psychologists or psychiatrists under the new fee schedule increased by only 1% compared to larger increases for other medical-legal evaluations (+45%). A Working Group member suggested that the cost pattern of psychiatric evaluations is consistent with the expectations of other medical-legal analysis and that psychiatric medical-legal evaluations tended to use ML104 (the most comprehensive and costly medical-legal comprehensive evaluations) when the complexity factor in the pre-April 1, 2021

¹ In 2021, telehealth E/M services accounted for 8% of all E/M services and non-telehealth accounted for 92%. WCIRB medical transaction data as of February 28, 2022.

Meeting Summary

Date: April 7, 2022

schedule was reimbursed based on time spent for the evaluation. Also, staff noted that psychiatric medical-legal evaluations had on average a lower payment share for additional record review than other medical-legal evaluations.

Overall, the Working Group generally concurred with the approach used in the retrospective evaluation of the cost impact of the new Medical-Legal Fee Schedule.

3. Plans to Update COVID-19 Medical Severity and Long COVID Analysis

Staff discussed the process to update the COVID-19 medical severity and long COVID analysis with the Working Group. Regarding the cost of treating long COVID in the workers' compensation system, several Working Group members agreed with the plan to review the medical patterns on the types of non-COVID-19 claims and potentially create a more comparable comparison group to COVID-19 claims that may involve long COVID. Regarding the plan to further explore medical-legal services on COVID-19 claims, several Working Group members suggested further reviewing the data as they did not expect COVID-19 claims to be more likely to involve medical-legal services. Staff agreed to further explore the issue in the data and also monitor the medical-legal services on COVID-19 claims as more data becomes available. A Working Group member agreed that staff should also explore if some indemnity-only COVID-19 claims would incur late medical payments or any medical payments in the future.

Staff also discussed the projection of future COVID-19 costs in the workers' compensation system as part of the upcoming September 1, 2022 Premium Rate Filing. Staff noted that it has begun to review published forecasts of future COVID-19 pandemic infection, hospitalization and death rates. Staff's early findings based on the available published sources are that because the population immunity in the U.S. is much higher in 2022 than before, fewer COVID-19 deaths or hospitalizations may occur in the next 12 months despite new variants that may emerge. The Working Group generally concurred with this observation.

Several Working Group members highlighted the extremely fluid nature of the COVID-19 pandemic and suggested considering the following aspects in the COVID-19 claim cost projection:

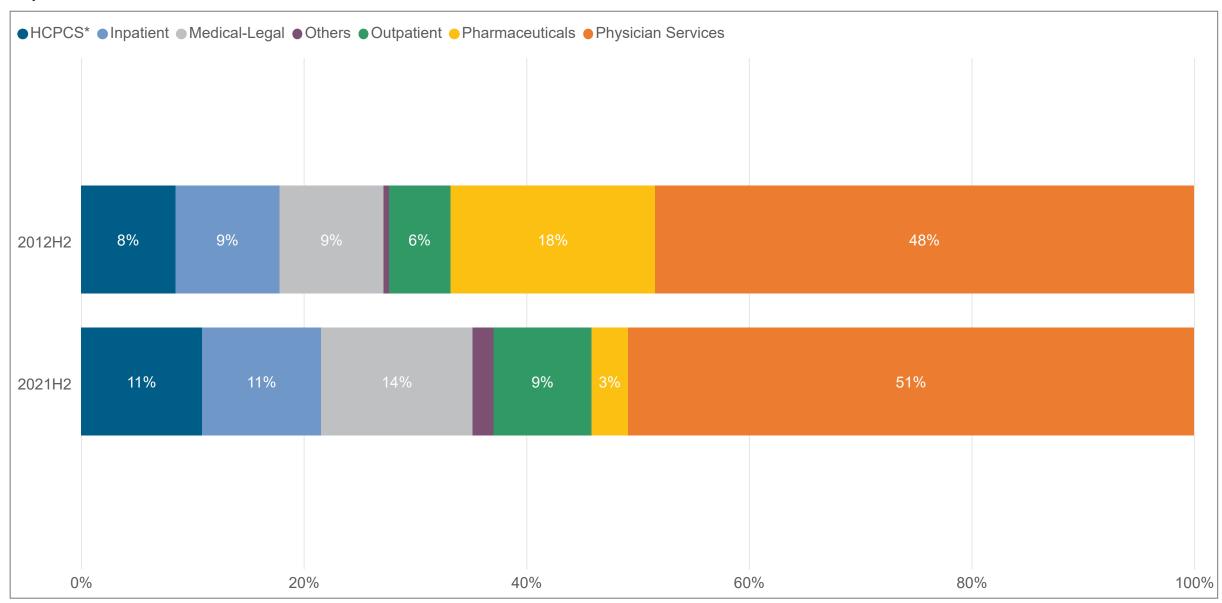

- Industry variations, such as the rate of vaccination and booster varies by industry sector
- As fewer mitigation measures are in place, workers may be more exposed to COVID infections. It
 may also be more challenging to determine if a COVID-19 infection is work related.
- The impact of long COVID in the workers' compensation has not yet materialized, and the general medical community is still improving in identifying specific long COVID symptoms.
- Therapeutics for COVID-19 and issues related to uncertainty in accessibility, availability and the clinical guidelines for using the therapeutics.

Item AC16-06-05 Update on Medical Severity Trends by Component

The WCIRB regularly monitors changes in paid per medical transaction and paid transactions per claim by medical component and summarizes the patterns for the Actuarial Committee. A brief update to that analysis with medical transaction data through December 31, 2021 will be presented at the meeting. Slides of the updated medical severity trends are attached.

Share of Total Medical Payments by Service Type

As of February 28, 2022

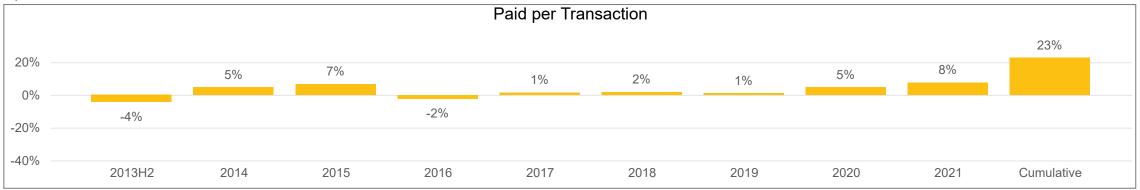

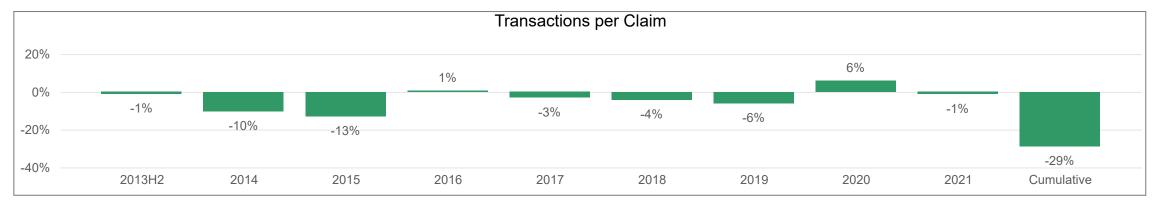

^{*} HCPCS stands for Healthcare Common Procedure Coding System. HCPCS codes primarily include ambulance services, durable medical equipment, prosthetics, orthotics, and supplies used outside a physician's office, home health services, and interpreter services.

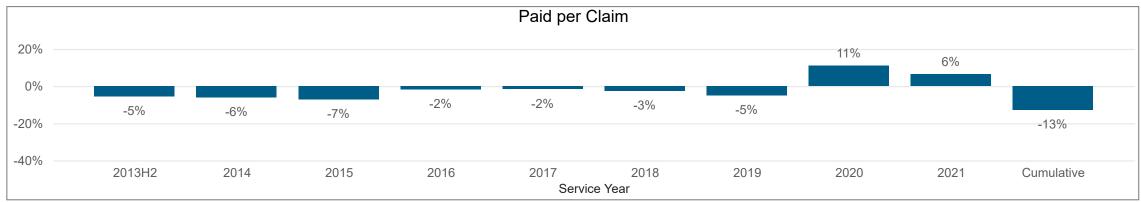

Source: WCIRB medical transaction data collected beginning in the third quarter of 2012. COVID-19 claims were excluded from the analysis.

% Change in All Medical Services Cost per Claim

As of February 28, 2022

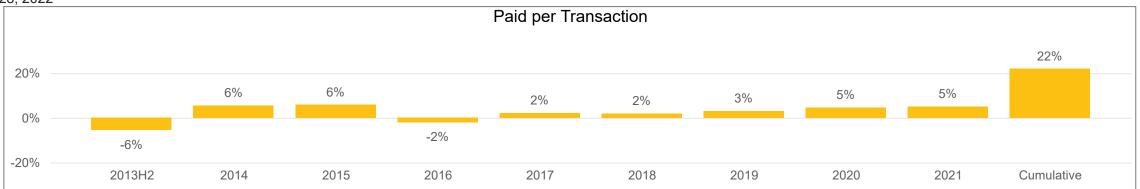

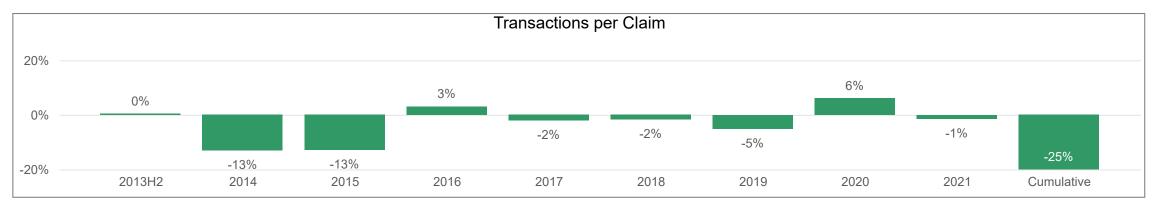

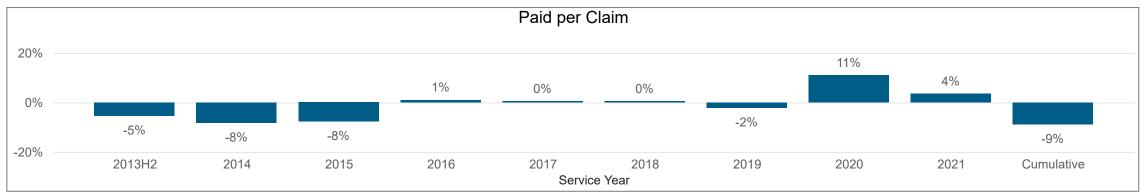

Source: WCIRB medical transaction data collected beginning in the third quarter of 2012. COVID-19 claims were excluded from the analysis and the exclusion applies to all subsequent slides.

% Change in *Physician Services* Cost per Claim (50% of All Medical Payments*)

As of February 28, 2022

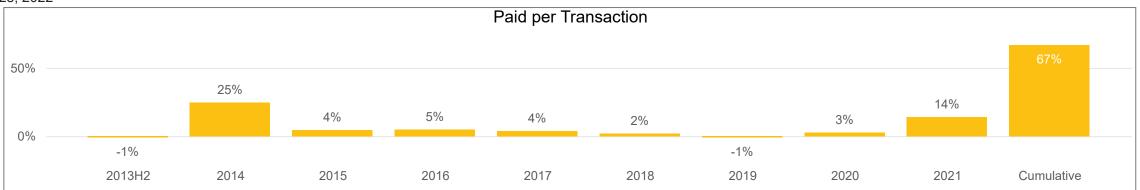

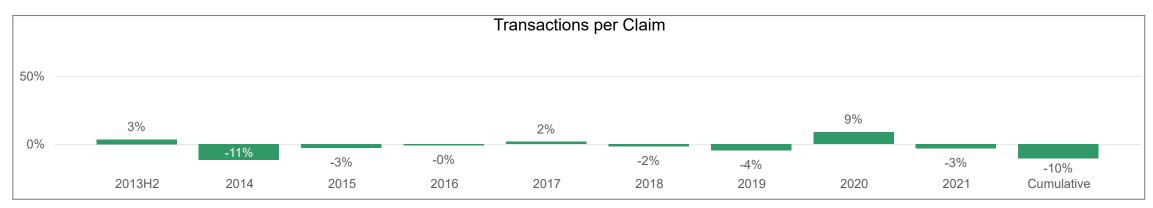

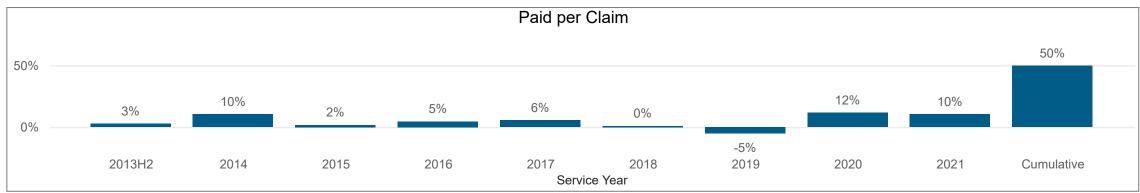

^{*} All medical payments are defined as the total Paid Amount (excluding Liens) in Service Year 2021 in the WCIRB medical transaction data. This definition applies to all subsequent slides.

% Change in Evaluation & Management Cost per Claim (20% of All Medical Payments)

As of February 28, 2022

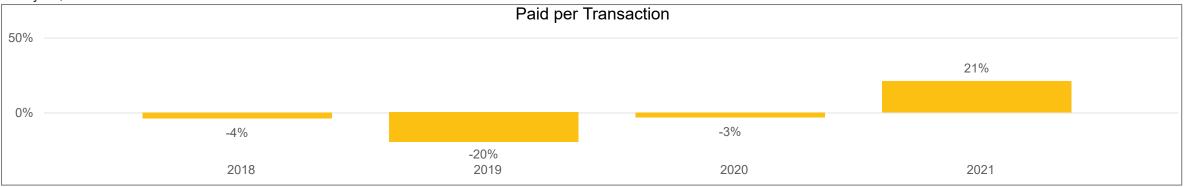

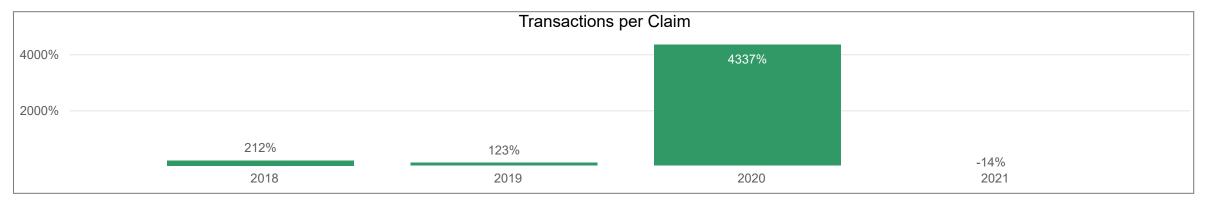

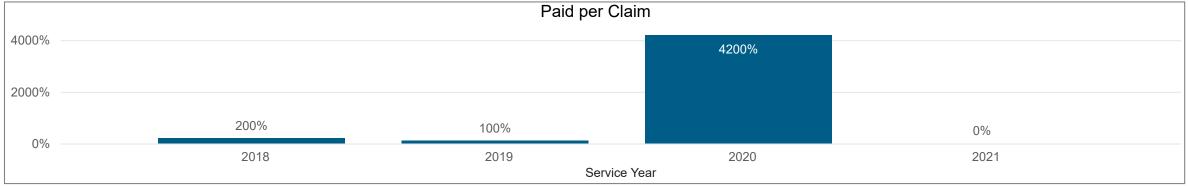

% Change in *Telemedicine* Cost per Claim (1.7% of All Medical Payments)

As of February 28, 2022

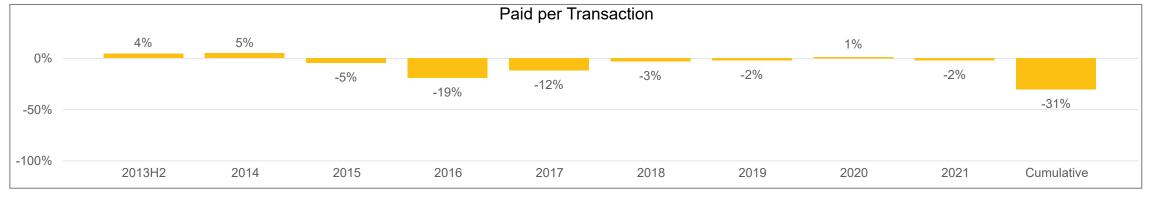

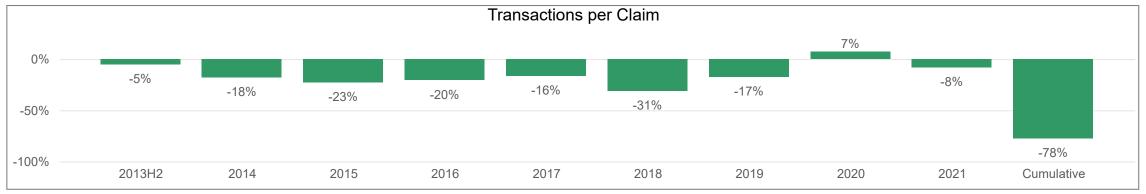

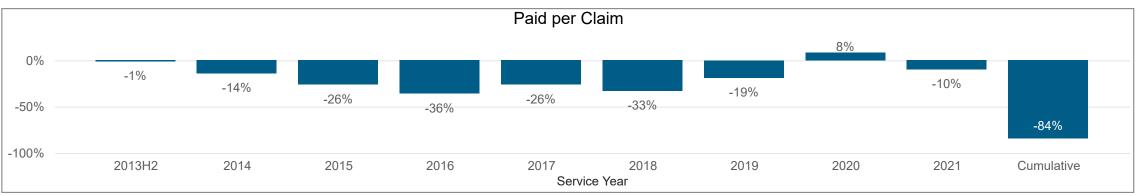

Note: For telemedicine services after March 1, 2020, only services from CMS list of telehealth services are included pursuant to the DWC rules.

% Change in *Pharmaceutical* Cost per Claim (3.1% of All Medical Payments)

As of February 28, 2022

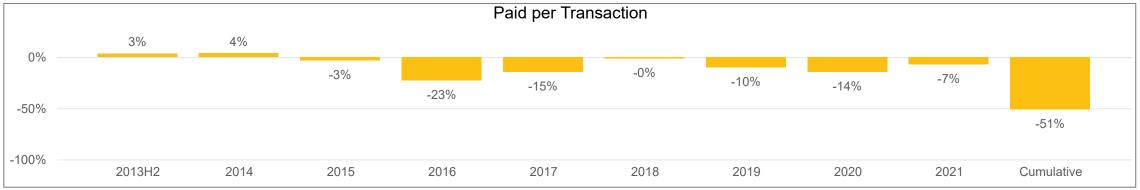

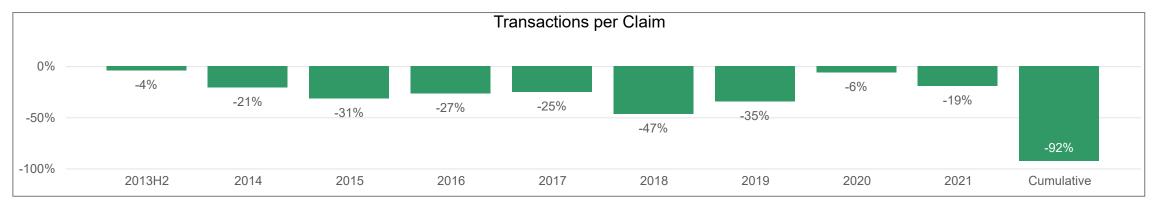

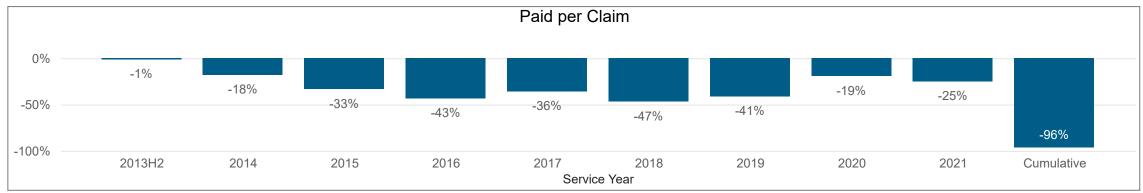

% Change in *Opioid* Cost per Claim (0.2% of All Medical Payments)

As of February 28, 2022

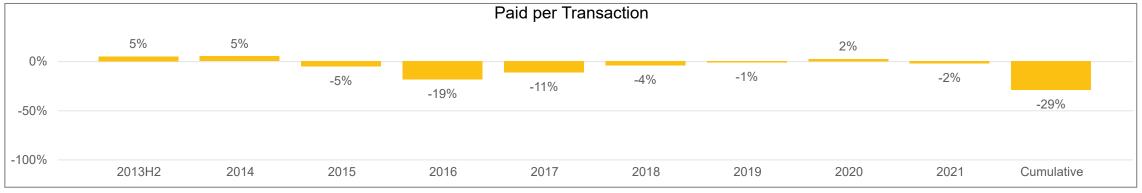

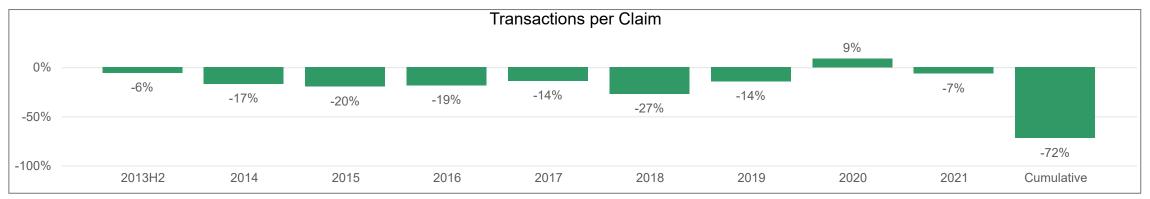

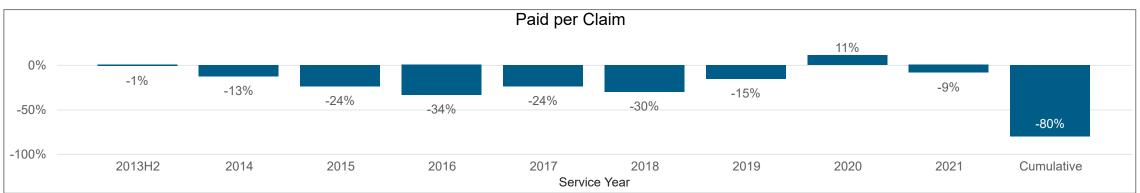

% Change in Non-Opioid Cost per Claim (2.9% of All Medical Payments)

As of February 28, 2022

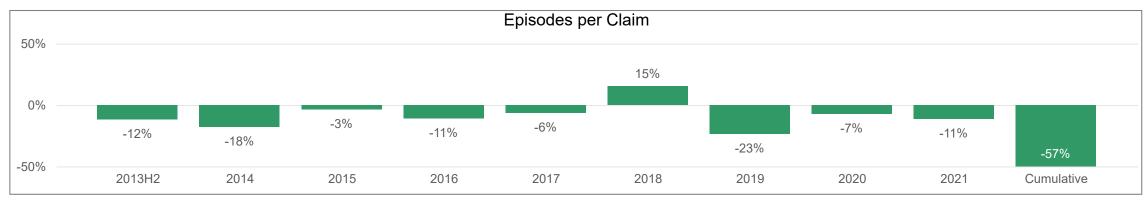

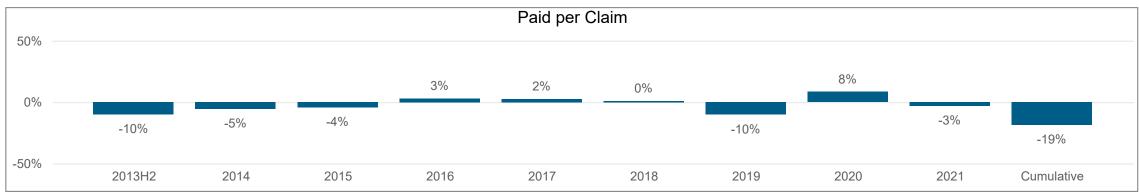

% Change in *Inpatient* Cost per Claim (episode-based) (11% of All Medical Payments)

As of February 28, 2022

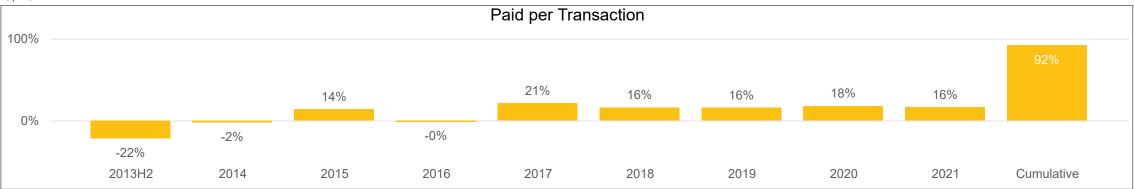

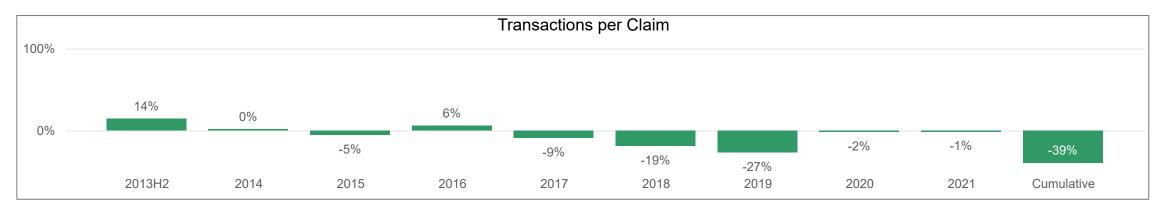

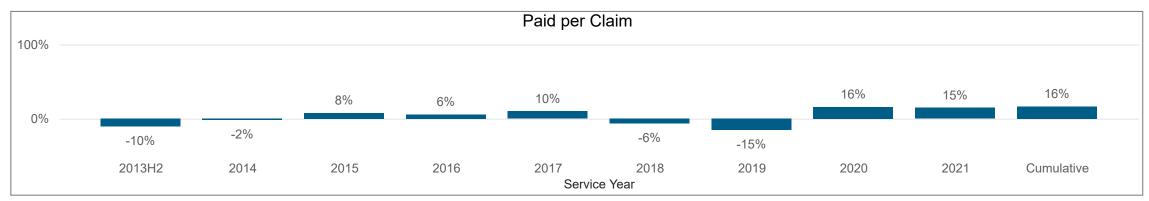

% Change in *Outpatient* Cost per Claim (9% of All Medical Payments)

As of February 28, 2022

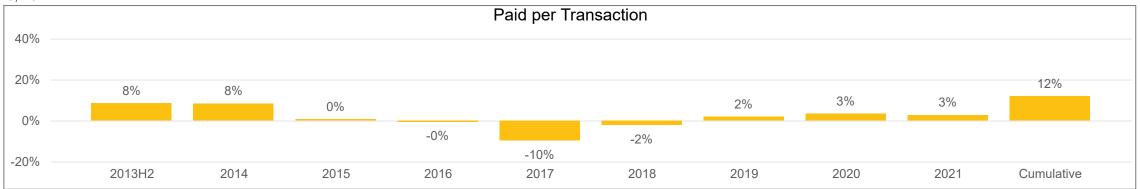

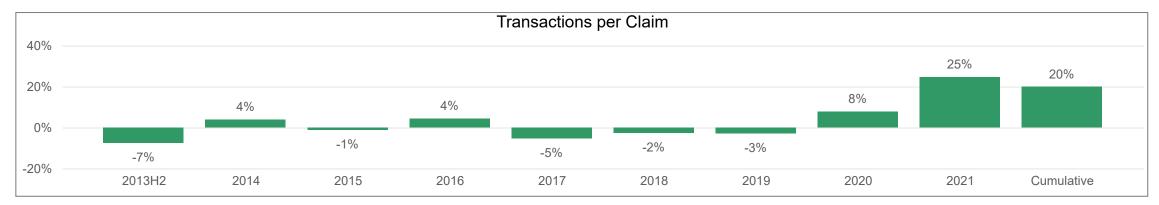

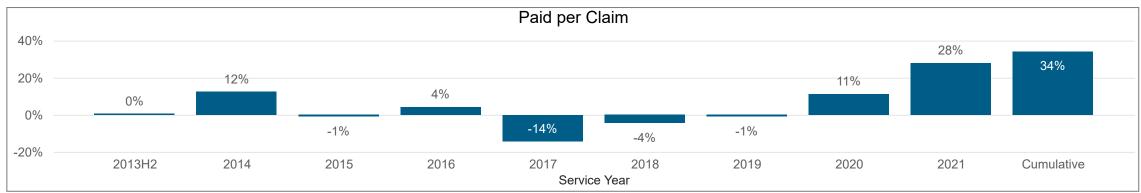

% Change in *Medical-Legal* Cost per Claim (14% of All Medical Payments)

As of February 28, 2022

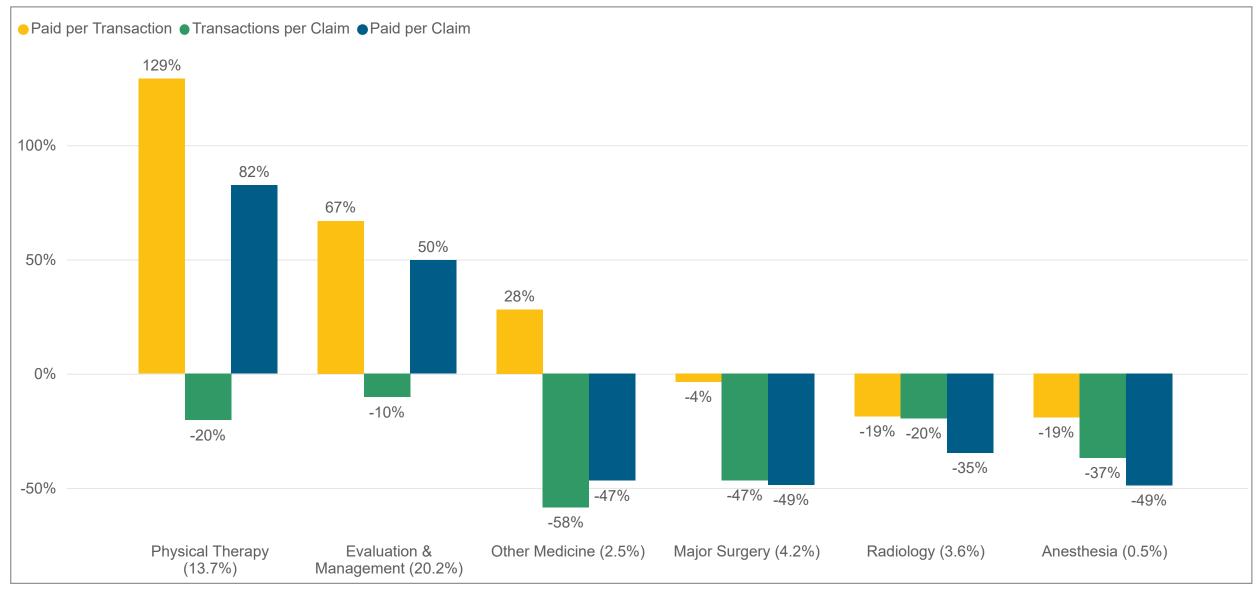

Cumulative % Change in Selected Components of Physician Services 2012H2 through 2021

As of February 28, 2022

Source: WCIRB medical transaction data collected beginning in the third quarter of 2012. Percentage in the parentheses represents the share of total medical payments for respective physician service categories.

Item AC22-03-01 First Quarter 2022 Review of Diagnostics

At the March 21, 2022 meeting, the Committee reviewed the First Quarter 2022 diagnostics. Those diagnostics were also reviewed by the Claims Working Group at the March 31, 2022 meeting. The information and feedback provided by the Claims Working Group on selected diagnostics will be provided at the meeting.

Item AC22-03-02 12/31/2021 Experience Review

At the March 21, 2022 meeting, the Committee reviewed a preliminary analysis of statewide experience through December 31, 2021. Exhibits 1 through 8 include an updated preliminary analysis of December 31, 2021 experience. In total, approximately 100% of the market is included. Wage and loss levels are projected to September 1, 2023—the approximate midpoint of experience on policies incepting between September 1, 2022 and August 31, 2023, and premiums were adjusted to the industry average filed pure premium rate level as of January 1, 2021 as reflected in the September 1, 2021 Pure Premium Rate Filing. The accident year 2020 and 2021 information shown in Exhibits 1 through 8 have been adjusted to remove COVID-19 claims.

The loss development, on-leveling and trending methodologies reflected in Exhibits 1 through 8 are generally consistent with those reflected in the September 1, 2021 Pure Premium Rate Filing and the preliminary analysis reviewed at the March 21, 2022 meeting, with the following preliminary updates made in part based on the discussion at the March 21, 2022 meeting:

- Projected loss development through 108 months is based on the latest year reform-adjusted paid loss development with adjustments for changes in indemnity claim settlement rates applied through 84 months (Exhibits 2.5.1 and 2.6.1).
- The adjustments for the impact of the 2021 medical fee schedule changes applied to projected
 medical loss development and the on-leveling of older years' medical losses have been updated
 to reflect a 10% increase to evaluation and management services (updated from 15%) and a 39%
 increase in medical-legal services (updated from 22%) based on staff's retrospective evaluation
 of these changes (Exhibits 2.6.1 and 4.2, also see Item AC22-04-04).
- Projected adjustments for changes to indemnity benefit levels for annual cost of living
 adjustments to weekly maximum temporary disability and permanent total disability benefits have
 been adjusted to reflect anticipated changes in the underlying wage levels upon which these
 weekly benefit maximums are statutorily based (Exhibit 4.1).
- The projected changes in average wage levels for 2020 to 2024 are updated with the March 2022 UCLA Anderson School of Business forecast and include the adjustments adopted by the Committee at the March 21, 2022 meeting for projected changes in industry mix and changes in the wage distribution within industries (Exhibit 5.1).
- The projected claim frequency trend for accident year 2021 is based on the average of (a) changes in aggregate indemnity claim counts (excluding COVID-19 claims) and changes in statewide employment with adjustments for projected shifts in industry mix and (b) the change projected by the WCIRB's indemnity claim frequency model. The projected claim frequency trends for accident years 2022 to 2024 are based on the changes projected by the WCIRB's indemnity claim frequency model. The frequency model forecasts include the refinements discussed at the December 9, 2021 and March 21, 2022 meetings, which include the forecasting of the cumulative injury index and reflecting the full impact of the frequency change constant term (Exhibits 6.1 and 12). Staff will also discuss alternative frequency projections that give less than full weight to the sharp increase in the cumulative injury index at the meeting.

¹ In the September 1, 2022 Pure Premium Rate Filing, premiums will be adjusted to the industry average filed pure premium rate level as of January 1, 2022.

- The preliminary projected average annual indemnity severity trend is 1.0% and the preliminary projected average annual medical severity trend is 1.0%, which is consistent with the September 1, 2021 Pure Premium Rate Filing (Exhibits 6.2 and 6.4).
- The projected loss ratio for policies incepting between September 1, 2022 and August 31, 2023 is based on applying the projected frequency and severity trends to accident years 2019 and 2021 and taking the average of those projections (Exhibits 7.1 and 7.3).

As shown in Exhibit 8, the projected loss to the industry average filed pure premium ratio for policies incepting between September 1, 2022 through August 31, 2023 based on December 31, 2021 experience and the methodologies reflected in Exhibits 1 through 8 is 0.568.

Additional supplemental information is included in Exhibits 9 through 12.

California Workers' Compensation Accident Year Experience as of December 31, 2021

| | Earned | Paid | Indemnity | Paid | Medical | | Total | Loss |
|-------------|----------------|------------------|-------------|---------------|---------------|---------------|----------------|--------|
| <u>Year</u> | <u>Premium</u> | <u>Indemnity</u> | Reserves | Medical** | Reserves | IBNR* | Incurred** | Ratio* |
| 1987 | 4,373,802,923 | 1,508,064,385 | 7,031,832 | 1,341,299,653 | 38,169,956 | 59,898,596 | 2,954,464,422 | 0.675 |

⁽a)

(c)

Paid medical loss development factors include the paid cost of medical cost containment programs for accident years 2011 and prior.

These factors are adjusted for the impact of pharmaceutical cost reductions and the 2021 changes to the Official Medical Fee Schedule and Medical-Legal Fee Schedule in order to bring the historical payments to the current pharmaceutical and medical service cost level.

Selections are latest year for the 12-to-24 month through 96-to-108 month factors and three-year average for the subsequent age-to-age factors.

The cumulative factors for 60 and 72 months are adjusted by -2.0% and -1.1%, respectively, for the impact of the SB 1160 reductions in future lien fillings.

(a) Selections are latest year for the 12-to-24 month through 96-to-108 month factors and three-year averages for the subsequent paid age-to-age factors.

(b) Based on calculations shown on Exhibits 2.5.3 to 2.5.8. Each of these selections is calculated as the latest year paid indemnity age-to-age factor multiplied by an adjustment for changes in claim settlement rates.

| | Accident Year | 1983 | 1984 | 1985 | 1986 | 1987 | 1988 | 1989 | 1990 | 1991 | 1992 | 1993 | 1994 | 1995 | 1996 | 1997 | 1998 | 1999 | Unadjusted (a) | Selected (c) | 1 |

Adjusted for the impact of changes in claim settlement rates on later period development for 288 months and later. See Exhibits 2.5.9 through 2.5.12. The ULT/444Pd tail factor was calculated based on an inverse power curve fit to a four-year average of the 108-to-120 through 348-to-360 factors and extrapolated to 80 development years. (g)

A. Total Reported Indemnity Claim Counts

| Accident | Evaluated as of (in months) | | | | | | | | | | | |

| 2019 | 38,298 | 78,588 | 105,790 | | | | | | | | | |
| 2020 | 33,362 | 68,458 | | | | | | | | | | |
| 2021 | 36.793 | | | | | | | | | | | |

F. Average Paid Indemnity per Closed Claim

| Accident | Evaluated as of (in months) | | | | | | | | | | |
|-------------|-----------------------------|-----------|-----------|-----------|-----------|-----------|-----------|--|--|--|--|
| <u>Year</u> | <u>12</u> | <u>24</u> | <u>36</u> | <u>48</u> | <u>60</u> | <u>72</u> | <u>84</u> | | | | |
| 2012 | | | | | | | 18,341 | | | | |
| 2013 | | | | | | 17,097 | 18,228 | | | | |
| 2014 | | | | | 16,330 | 17,926 | 18,996 | | | | |
| 2015 | | | | 14,494 | 16,892 | 18,271 | 19,248 | | | | |
| 2016 | | | 11,035 | 14,480 | 16,452 | 17,800 | | | | | |
| 2017 | | 6,647 | 11,145 | 14,345 | 16,459 | | | | | | |
| 2018 | 2,874 | 7,039 | 11,385 | 14,614 | | | | | | | |
| 2019 | 3,156 | 7,059 | 11,430 | | | | | | | | |
| 2020 | 3,301 | 7,747 | | | | | | | | | |
| 2021 | 3,255 | | | | | | | | | | |

- (a) Ratio of closed indemnity claim counts (Item C) to the estimated ultimate indemnity claim counts (Item B) for that accident year.
- (b) The claim counts for the latest evaluation of each accident year are equal to the reported number of closed indemnity claims. All prior evaluations shown are the product of the latest ultimate indemnity claim settlement ratio (Item D) and the ultimate indemnity claim counts (Item B) for that accident year.

G. Adjusted Average Paid Indemnity per Closed Claim (c)

| Accident | Evaluated as of (in months) | | | | | | | | | | |
|-------------|-----------------------------|-----------|-----------|-----------|-----------|-----------|--------|--|--|--|--|
| <u>Year</u> | <u>12</u> | <u>24</u> | <u>36</u> | <u>48</u> | <u>60</u> | <u>72</u> | 84 | | | | |
| 2012 | | | | | | | 19,038 | | | | |
| 2013 | | | | | | 17,702 | 18,483 | | | | |
| 2014 | | | | | 17,003 | 18,263 | 19,126 | | | | |
| 2015 | | | | 14,756 | 17,076 | 18,398 | 19,248 | | | | |
| 2016 | | | 10,491 | 14,123 | 16,471 | 17,800 | | | | | |
| 2017 | | 5,955 | 9,949 | 13,914 | 16,459 | | | | | | |
| 2018 | 2,891 | 6,306 | 10,636 | 14,614 | | | | | | | |
| 2019 | 3,177 | 6,808 | 11,430 | | | | | | | | |
| 2020 | 3,420 | 7,747 | | | | | | | | | |
| 2021 | 3,255 | | | | | | | | | | |

H. Adjusted Paid Indemnity on Closed Claims (in \$000) (d)

| 2019 | -1,479 | 16,129 | | | | | | | | | |
| 2020 | -7.118 | | | | | | | | | | |

L. Adjusted Paid Indemnity on Open Claims (in \$000) (g)

| Accident | Evaluated as of (in months) | | | | | | |
|-------------|-----------------------------|-----------|-----------|-----------|-----------|-----------|---------|
| <u>Year</u> | <u>12</u> | <u>24</u> | <u>36</u> | <u>48</u> | <u>60</u> | <u>72</u> | 84 |
| 2012 | | | | | | | 331,991 |
| 2013 | | | | | | 400,249 | 347,050 |
| 2014 | | | | | 529,240 | 446,977 | 372,024 |
| 2015 | | | | 728,147 | 566,867 | 457,117 | 396,231 |
| 2016 | | | 908,636 | 754,241 | 575,692 | 470,766 | |
| 2017 | | 808,433 | 956,705 | 773,487 | 589,881 | | |
| 2018 | 338,072 | 852,664 | 963,715 | 792,331 | | | |
| 2019 | 352,487 | 899,269 | 1,039,858 | | | | |
| 2020 | 341,761 | 811,855 | | | | | |
| 2021 | 393,950 | | | | | | |

- (e) Each amount is equal to the product of [the average monthly indemnity payment per open indemnity claim] and [the number of months for the current evaluation]. For evaluations indicating claim settlement rate decreases, the average monthly indemnity payment per open indemnity claim at the prior evaluation is used. For evaluations indicating claim settlement rate increases, the average monthly indemnity payment per open indemnity claim at the same evaluation is used.
- (f) Each amount is equal to [the difference between unadjusted and adjusted closed indemnity claim counts (Items C and E)] multiplied by the corresponding [average paid indemnity per open claim for indemnity claims in transition (Item J)].
- (g) Each amount is the sum of [paid indemnity on open claims (Item I)] and the corresponding [incremental changes in paid indemnity on open claims resulting from the impact of changes in claim settlement rates (Item K)].

| 2020 | 2.956 | | | | | | | | | | | |

⁽h) Each amount is the sum of the adjusted paid indemnity on closed claims (Item H) and the adjusted paid indemnity on open claims (Item L).

⁽i) Development factors are based on paid indemnity losses from the same insurer mix as that used in the adjustment for changes in claim settlement rates and applied in the calculation of the development factors in Item N.

P. Impact of Adjustment for Changes in Claim Settlement Rates (j)

| Accident | | Evaluated as of (in months) | | | | | | | | | | |

Paid medical loss development factors include the paid cost of medical cost containment programs for accident years 2011 and prior.

These factors are adjusted for the impact of pharmaceutical cost reductions through 2018 and the 2021 changes to the Official Medical Fee Schedule and Medical-Legal Fee Schedule in order to bring the

Selections are latest year for the 12-to-24 month through 96-to-108 month factors and three-year averages for the subsequent paid age-to-age factors.

Based on calculations shown on Exhibits 2.6.3 to 2.6.8. Each of these selections are calculated as the latest year paid medical age-to-age factor multiplied by an adjustment for changes in claim settlement rates. (e) (c) (b) (e)

The cumulative factors for 60 and 72 months are adjusted by -2.0% and -1.1%, respectively, for the impact of the SB 1160 reductions in future lien filings.

| 2021 | 2,960 | | | | | | |

- (a) Ratio of closed indemnity claim counts (Item C) to the estimated ultimate indemnity claim counts (Item B) for that accident year.
- (b) The claim counts for the latest evaluation of each accident year are equal to the reported number of closed indemnity claims. All prior evaluations shown are the product of the latest ultimate indemnity claim settlement ratio (Item D) and the ultimate indemnity claim counts (Item B) for that accident year.

G. Adjusted Average Paid Medical per Closed Indemnity Claim (c)

| Accident | | | Evaluate | d as of (in mo | onths) | | |

| 2020 | 362,175 | 825,780 | | | | | | | |
| 2021 | 398,458 | | | | | | | | |

- (e) Each amount is equal to the product of [the average monthly medical payment per open indemnity claim] and [the number of months for the current evaluation]. For evaluations indicating claim settlement rate decreases, the average monthly medical payment per open indemnity claim at the prior evaluation is used. For evaluations indicating claim settlement rate increases, the average monthly medical payment per open indemnity claim at the same evaluation is used.
- (f) Each amount is equal to [the difference between unadjusted and adjusted closed indemnity claim counts (Items C and E)] multiplied by [the corresponding average paid medical per open indemnity claim for indemnity claims in transition (Item J)].
- (g) Each amount is the sum of [paid medical on open indemnity claims (Item I)] and the corresponding [incremental changes in paid medical on open indemnity claims resulting from the impact of changes in indemnity claim settlement rates (Item K)].

⁽i) Development factors are based on paid medical losses from the same insurer mix as that used in the adjustment for changes in claim settlement rates and applied in the calculation of the development factors in Item O.

⁽j) Each factor represents the change in age-to-age development factors from Item P to those in Item O.

⁽k) Each factor is the product of [1.0 + the impact of adjustment for changes in claim settlement rates (Item Q)] and [the adjusted paid medical age-to-age development factor from Exhibit 2.6.1].

- (a) Based on Exhibit 1. Paid MCCP costs are excluded from accident years 2011 and subsequent.
- (b) Based on experience evaluated as of December 31, 2021. Reflects adjustments for the pharmaceutical cost reductions through 2018 and 2021 changes to the Official Medical Fee Schedule (OMFS) and Medical-Legal Fee Schedule (MLFS), restating the historical medical paid-to-date ratios at a 2018 pharmaceutical cost level and a 2021 OMFS and MLFS level.
- See Exhibits 2.6.1 and 2.6.2. (c)
- (d) The developed medical loss ratios shown were derived based on an adjustment for pharmaceutical cost reductions and 2021 medical fee schedule changes. They are only for purposes of projecting future medical loss ratios and do not reflect true estimates of ultimate loss ratios for those accident years.

- (a) Based on WCIRB evaluations of the average impact of legislative changes on the cost of indemnity benefits. These annual changes in benefits reflect the WCIRB's retrospective estimates of the cost impact of recent legislation as reflected in emerging post-reform costs. The annual cost impacts have been segregated between claim severity and claim frequency impacts.
- (b) These impacts are based on the weekly wages (see column 2 of Exhibit 5.1) of injured workers and the legislatively scheduled benefits for that year.
- (c) { [Column (1) /100 + 1.0] x [Column (2) /100 + 1.0] x [Column (3) /100 + 1.0] 1.0 } x 100.
- (d) These factors represent the combined impact of the annual benefit changes on claim severity shown in Column (1), claim frequencies shown in Column (2) and wage inflation impact on benefits shown in Column (3), adjusted to the 9/1/2023 level.
- (e) On-level factors for accident years 2002, 2003 and 2004 adjust the portion of permanent disability claims that are estimated to not be subject to the January 1, 2005 PDRS (95% for accident year 2002, 75% for accident year 2003 and 40% for accident year 2004) to the January 1, 2005 PDRS level, and adjust for the corresponding utilization impacts on all 2002, 2003 and 2004 indemnity claims.

- (a) From a Special Carrier Study through 1990. Based on WCIRB's Aggregate Indemnity and Medical Costs Calls for years 1991 through 2012. Based on WCIRB medical transaction data from 2013 onwards. Accident years 2011 and subsequent do not include MCCP costs.
- (b) Based on the WCIRB's evaluation of the cost impact of changes in the medical fee schedules. Does not include the impact of the 2021 changes to the Official Medical Fee Schedule and Medical-Legal Fee Schedule, which are reflected in the medical loss development projections for accident years 2013 and later.
- (c) Based on a component of the Consumer Price Index. Projections furnished by the California Department of Finance.
- (d) Adjusted CPI on workers' compensation medical costs that are not subject to fee schedules. The current year impact is the weighted average of 0% and Column (4), with Columns (1) and (2) from prior years as weights. (i) 1993's non-fee proportion is reduced by 13.8% due to the new medical-legal fee schedule enacted in 1994. (ii) 1998's non-fee proportion is reduced by 7.7% due to the Inpatient Hospital Fee Schedule (IHFS) effective 4/1/1999. (iii) 2002's non-fee proportion is reduced by 7.6% due to the new pharmaceutical fee schedule effective 1/1/2003. (iv) 2003's non-fee proportion is reduced by 17.2% due to the outpatient fee schedule effective 1/1/2004. (v) Given the anticipated impact of legislative reform, a 0% inflation rate has been assumed for 2004 and 2005.
- (e) Column (6) = Column (3) + Column (5).
- (f) The impact of the 2021 changes to the Official Medical Fee Schedule and Medical-Legal Fee Schedule is applied to accident years 2012 and prior, which are not reflected in the medical loss development projections.

- (a) Reflects the WCIRB's most recent estimates of the cost impact of legislation. Does not include the impact of the SB 1160 lien provisions on future medical costs as well as the estimated reductions to pharmaceutical costs attributable to SB 863, which are reflected in the medical loss development projections.
- (b) This reflects the annual percentage impact on medical costs due to changes in the frequency of indemnity claims as a result of benefit changes.
- (c) [Column (1) + 1.0] x [Column (2) + 1.0] 1.0

- (a) See Exhibit 4.2, Column (6).
- (b) See Exhibit 4.3, Column (3).
- (c) Column (3) = $[1.0 + \text{Column (1)}] \times [1.0 + \text{Column (2)}] 1.0$.
- (d) These factors adjust the annual impact shown in Column (3) to the 9/1/2023 level.

Annual Wage Level Changes

- (a) Historical wage changes through 2020 are based on Bureau of Labor Statistics data. Forecasts for 2021 and forward are based on the average of wage level projections made by the UCLA Anderson School of Business as of March 2022 and those made by the California Department of Finance as of November 2021.
- (b) Wage level changes for 2020 to 2024 were adjusted for estimated shifts in industrial mix and shifts in the wage level mix within industries impacting average wages in order to more appropriately project changes in average wages for the typical worker.
- (c) Based on Column (1) for 2019 and prior and Column (2) for 2020 and subsequent.

- (a) See Exhibit 5.1.
- (b) Based on WCIRB calendar year experience calls. The industry average charged rates reflect most rating plan adjustments but do not reflect the application of deductible credits or retrospective rating plan adjustments.
- (c) Reflects (1) advisory pure premium rate level changes to bring premium to the advisory September 1, 2021 pure premium rate level and (2) an additional adjustment factor, which is the ratio of the average advisory September 1, 2021 pure premium rate (\$1.41) to the industry average filed pure premium rate as of January 1, 2021 (\$1.86).
- (2b) ÷ (2a). This column adjusts premiums at the industry average charged rate level to the industry average filed pure premium rate level as of January 1, 2021.
- (e) Based on unit statistical data.
- (f) Based on average promulgated experience modifications. Calendar years 1996 through 2000 include adjustments for the impacts of AB 1913 and SB 1217 (1998).
- (9) Based on a comparison of premium reported on a calendar year basis to premium reported on an estimated ultimate policy year basis over the course of two accident years. The factor is applied only for calendar years 2007 to 2010 and 2020 to 2021, during which reported premiums were impacted by recessionary economic forces.
- (h) (1)x(2c)x(3)x(6) + [(4)x(5)] for calendar years 2007 to 2010. (1)x(2c)x(3) + [(4)x(5)] for all other calendar years.

0.061

0.103

0.044

The indicator variable for Cal-OSHA inspections has been moved into an on-level adjustment. See Actuarial Committee item AC21-12-09.

Regression is over AY 1979 through AY 2020. AY 2021 through AY 2024 are projections.

X Coefficient(s)

Std Err of Coef.

The constant term is unadjusted and no longer includes measured offsets of -0.020 that recognized annual changes in real benefit levels relative to nominal benefit levels and long-term economic growth. Future studies showed that the inclusion of the offset was only necessary because projections of changes in the cumulative injury index were not included as part of forecast frequency changes. See Actuarial Committee Item AC21-12-09.

The Indemnity Benefit Level variable excludes indemnity benefit utilization, cost-of-living adjustments, and changes in the death and permanent total benefits.

The Indemnity Benefit Level variable has been revised due to on-leveling reassessments. See Actuarial Committee item AC09-03-03.

For 1993 on, cumulative claims include both cumulative trauma and occupational disease claims. See Actuarial Committee item AC14-03-19.

The definition of cumulative claims has been further amended to include claims coded with certain nature of injury codes in USR. See Actuarial Committee item AC21-12-09.

The cumulative injury index is forecasted using a time series model with an autoregressive term of degree 2. See Actuarial Committee item AC21-12-09.

Economic variables are historical through 2021; March 2022 UCLA Anderson Forecasts for 2022 on.

^{*}AY 2020 is preliminary and change is based on a comparison of 2020 accidents on 2019 policies to 2019 accidents on 2018 policies.

Selected Medical Severity Trend:

(a) Estimated ultimate severities for all accident years are derived by dividing ultimate medical losses on indemnity claims by ultimate indemnity claim counts. The estimated ultimate medical severities were derived from the projected ultimate loss ratios shown in Exhibit 3.2, column (6).

Source: WCIRB quarterly experience calls, excluding COVID-19 claims.

⁽b) These adjustment factors are based on Exhibit 4.4, excluding the impact of frequency, and including the impact of SB 1160 provisions and 2021 changes to the Official Medical Fee Schedule and Medical-Legal Fee Schedule, applicable to outstanding medical losses.

⁽c) Severities for accident years 2011 and subsequent do not reflect the cost of medical cost containment programs (MCCP). Severities for accident years 2010 and prior do reflect MCCP costs.

Projection of Medical Severity Trends by Accident Year Adjusted to Remove the Cost of Medical Cost Containment Programs (MCCP) Based on Experience as of December 31, 2021

| 9/1/2023 | | | | 0.291 | | | |

- (a) See Exhibit 3.2. Medical loss ratios for accident years 2011 and subsequent do not reflect the cost of medical cost containment programs (MCCP). Ratios for accident years 2010 and prior do reflect MCCP costs.
- (b) See Exhibit 4.4.
- (c) See Exhibit 5.2.
- (d) The trending projection is based on frequency and severity growth separately applied to the 2019 and 2021 on-level ratios. The frequency growth estimates are based on the actual 12-month intra-class frequency trend from accident year 2020, the average of the 12-month frequency change (see Exhibit 12) and frequency model projection for accident year 2021 from Exhibit 6.1, and frequency model projections for accident years 2022 to 2024 from Exhibit 6.1. The annual medical severity growth estimates are from Exhibit 6.4.
- (e) Accident years 2011 and subsequent do not reflect the paid MCCP costs. Accident years 2010 and prior do reflect paid MCCP costs.

On-Level Medical Loss to Industry Average Filed Pure Premium Ratios Based on Experience as of December 31, 2021

^{*} On-level medical to industry average filed pure premium ratios (see Exhibit 7.3)

^{**} The 9/1/2023 medical to industry average filed pure premium ratio was calculated based on separate frequency and severity trends applied to the 2019 and 2021 years.

Indicated Loss to Industry Average Filed Pure Premium Ratios and Average Pure Premium Rate For Policies with Effective Dates between September 1, 2022 and August 31, 2023 Based on Experience as of December 31, 2021

| | <u>Indemnity</u> | <u>Medical</u> | <u>Total</u> |
|---|------------------|----------------|--------------|
| 1. Projected Loss to Industry Average Filed Pure Premium Ratio (See Exhibits 7.1 and 7.3) | 0.277 | 0.291 | 0.568 |

Notes All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year.

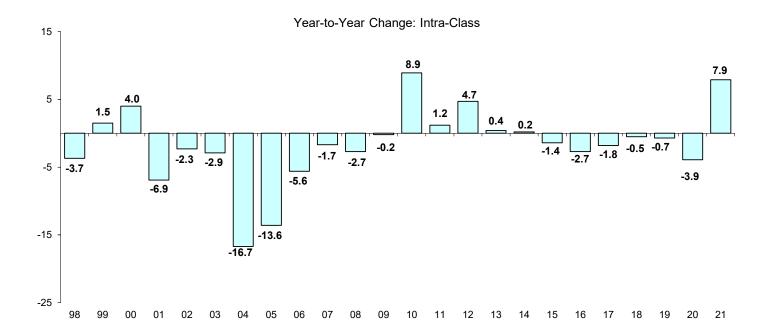

Therefore, each accident year may contain a different mix of insurers (ranging from 83% to 99% of the total California workers' compensation insured market measured using 2020 earned premium levels).

Source: WCIRB accident year experience calls, excluding COVID-19 claims.

California Workers' Compensation Estimated Indemnity Claim Frequency by Accident Year

Note:

The 2021 estimate is based on a comparison of claim counts based on WCIRB accident year experience as of December 31, 2021 relative to the estimated change in statewide employment. Experience excludes COVID-19 claims. Prior years are based on unit statistical data.

Item AC22-04-01 9/1/2022 Filing – Loss Adjustment Expense Experience Review

Staff has developed the preliminary indicated ratio of loss adjustment expense (LAE) to loss for policies incepting between September 1, 2022 and August 31, 2023 based on calendar year unallocated loss adjustment expense (ULAE) experience through calendar year 2020 and accident year allocated loss adjustment expense (ALAE) experience as of December 31, 2021, which reflects the latest LAE information available. The projection methodologies are generally consistent with those reflected in the WCIRB's September 1, 2021 Pure Premium Rate Filing. The indicated ULAE and ALAE projections, including projections for the cost of medical cost containment programs (MCCP), are summarized separately below.

ULAE Projection

Beginning with the WCIRB's 2015 Expense Call, the WCIRB has collected information related to (a) negative "service fee" type adjustments that are sometimes reflected in reported countrywide ULAE, (b) losses on claims on large deductible policies and/or handled by third-party administrators (TPA) for which the associated claims handling costs are not reported in countrywide ULAE amounts and (c) various countrywide loss and ULAE amounts consistent with what is reported by insurers on the Insurance Expense Exhibit.¹ This information is used to more accurately reflect the cost of handling claims in California primarily for insurers that make use of TPA or make other adjustments to countrywide reported ULAE costs that ultimately are apportioned to California. Beginning with the WCIRB's 2017 Expense Call, the WCIRB has also collected information related to countrywide open indemnity claim counts in order to more accurately estimate California's share of countrywide paid ULAE.²

The approach to derive the adjusted calendar year California paid ULAE for ratemaking purposes, as reflected in the last several pure premium rate filings, involves several steps. First, reported negative "service fee" type adjustments to ULAE were added back into the reported countrywide paid ULAE amount. Second, countrywide paid losses on large deductible policies and/or claims handled by TPAs for which the associated claims handling costs were not reported in countrywide ULAE were subtracted from the countrywide paid losses. This adjustment was applied to losses gross or net of deductible amounts depending on whether the insurer reported ULAE costs on a gross or net basis. Third, the adjusted countrywide paid ULAE ratio was derived based on the ratio of adjusted countrywide paid ULAE computed in the first step described above to adjusted countrywide paid losses computed in the second step. Fourth, the adjusted countrywide paid ULAE was derived by multiplying the adjusted countrywide paid ULAE was apportioned to California based on California's share of the insurer's countrywide indemnity claim counts open at the end of the previous calendar year.

For a number of insurers, the negative "service fee" type adjustments to ULAE do not apply and the reported countrywide ULAE reflects all claims handling costs on large deductible policies or related to claims handled by TPAs. In these instances, the approach described above simplifies to apportioning the reported countrywide ULAE to California based on California's share of the insurer's countrywide open indemnity claim counts. Although staff believes open indemnity claim counts is a reasonable measure to apportion countrywide ULAE to California, some insurers may use a more detailed and accurate method to derive the California ULAE. Given that these insurers do not require special adjustments to the reported paid ULAE amounts, the California paid ULAE as reported on the WCIRB's Expense Call was used in deriving the ratios of California paid ULAE to paid losses for these insurers in lieu of the formulaic approach discussed above.

¹ See Item AC15-03-07 of the June 12, 2015 and August 6, 2015 Actuarial Committee Agendas.

² See Item AC17-09-02 of the September 5, 2017 Actuarial Committee Agenda.

Exhibit 1 shows calendar year paid ALAE and ULAE as ratios to paid losses by type of insurer. Calendar years 2016 through 2020 ULAE have been computed as described above and include an apportionment of countrywide ULAE to California based on open indemnity claim counts. As ULAE payments related to handling COVID-19 claims cannot be segregated from other ULAE payments, the paid losses for calendar year 2020 underlying the ULAE ratios shown in Exhibit 1 include losses paid on COVID-19 claims. Calendar year 2015 ULAE is adjusted as described above but reflects an apportionment of countrywide ULAE to California based on paid losses. In addition, as discussed at prior meetings and reflected in prior pure premium rate filings, the ULAE for calendar years 2013 and 2014 also reflect partial adjustments for the issues addressed by the changes to the Expense Call for several large national insurers. As a result of these adjustments and enhancements, the ULAE ratios shown on Exhibit 1 for "national" insurers have become increasingly comparable to those for other private insurers since 2013. As discussed at prior meetings, ULAE ratios for State Compensation Insurance Fund (State Fund) are much higher than those of other insurers, although differences have narrowed in recent years.

Exhibit 2 shows the average calendar year paid ULAE per open indemnity claim for private insurers. The ULAE severities for calendar years 2016 through 2020 shown on Exhibit 2 were computed based on the approach described above and, as a result, are not comparable to the ULAE severities for prior years, which for 2013 through 2015 only partially reflect the adjustments discussed above and, for prior to 2013, are based solely on the California ULAE reported by insurers. The amounts shown for calendar year 2020 include COVID-19 claims.

Exhibits 3.1 through 3.5 show the preliminary projection of ULAE to loss based on the relationship of calendar year paid ULAE to the number of indemnity claims open at the beginning of the calendar year based on claim count information reported as of December 31, 2021.3 Projections of ultimate indemnity claim counts for accident years 2022 to 2024 shown in Exhibit 3.3 are based on the intra-class indemnity claim frequency changes reflected in the analysis of projected losses (Item AC22-03-02) applied to accident years 2019 and 2021.⁴ As in the September 1, 2021 Pure Premium Rate Filing, the projections of open claim counts shown in Exhibit 3.3 are based on incremental indemnity claim closing rates.⁵ As in the last several pure premium rate filings, the ULAE projection shown in Exhibit 3.5 is based on statewide claim count and loss projections but using the estimated paid ULAE per open indemnity claim based on the experience of private insurers only.6

The projected ULAE severity trends were based on projected annual growth rates in California wage levels as reflected in the analysis of projected losses (Item AC22-03-02). In prior pure premium rate filings, the projected ULAE severity was based on trending from the latest two calendar years' average paid ULAE per open indemnity claim. Calendar year 2020 is significantly impacted by the COVID-19 pandemic and economic downturn. In addition, although COVID-19 claim counts and losses can be excluded from 2020 information based on WCIRB aggregate financial data calls, it is not possible to segregate ULAE paid on COVID-19 claims from other ULAE amounts. As a result, staff recommends projecting the ULAE severity based on the average of the prior two calendar years' (2018 and 2019) average paid ULAE. As shown in Exhibit 3.5, the projected ratio of ULAE to loss for policies incepting between September 1, 2022 and August 31, 2023 using this approach is 15.5%.

As in the last several pure premium rate filings, the preliminary projected ratio of ULAE to losses is based on the average of the projections resulting from an open claim count-based method and a paid lossbased method. In the September 1, 2021 Pure Premium Rate Filing, the paid loss-based approach was based on the latest two calendar years' paid ULAE to paid loss ratios. As discussed above, calendar year

³ COVID-19 claims are excluded.

⁴ This is based on the trending approach used in the analysis of projected losses in Item AC22-03-02. Given that accident years 2019 and 2021 are used in the projection of open indemnity claims in this approach, the premium used to determine the losses in the projected ULAE to loss ratio shown in line 5 of Exhibit 3.5 is based on the average of calendar years 2019 and 2021.

⁵ See Item AC19-12-02 of the December 11, 2020 Actuarial Committee Agenda.

⁶ The ULAE experience of State Fund has been excluded for reasons that have been discussed at prior Committee meetings and in prior pure premium rate filings and California Department of Insurance decisions.

2020 paid ULAE ratios to paid loss may be distorted by the pandemic. As a result, for this approach, staff recommends using the average of the prior two calendar years' (2018 and 2019) paid ULAE to paid loss ratios for private insurers of 13.9% as shown on Exhibit 1. The preliminary ULAE projection for policies incepting between September 1, 2022 and August 31, 2023 based on the average of the claim count-based and paid loss-based projections is 14.7%. (For comparison purposes, the projected ULAE to loss ratio reflected in the September 1, 2021 Pure Premium Rate Filing was 13.7%.)

Table 1 shows the projected ratio of ULAE to losses based on the methodology described above. Table 1 also shows alternative ULAE projections based on the open claim count-based methodology projected based on calendar year 2019 only as shown in Exhibit 4 and projections based on recent calendar year ratios of paid ULAE to paid losses for private insurers based on Exhibit 1.

| ULAE Projection Method | Statewide with Private Insurer Average ULAE |
|---|---|
| April 14, 2022 Agenda Methodology | |
| Paid ULAE per Open Indemnity Claim Applied to 2018 and 2019 | 15.5% |
| Average of Calendar Year 2018 and 2019 Paid ULAE to Paid Loss Ratios | 13.9% |
| Average of Open Indemnity Claim-Based and Paid Loss-Based Projections | 14.7% |
| Alternative Methodologies | |
| Paid ULAE per Open Indemnity Claim Applied to 2019 | 14.4% |
| Calendar Year 2019 Paid ULAE to Loss Ratio | 13.0% |
| Average of Latest Two Calendar Years' Paid ULAE to Loss Ratios | 14.4% |

ALAE Projection – Excluding MCCP Costs

For a number of years, the WCIRB has based the ALAE projection on a methodology that projects future ALAE as a function of the anticipated future number of indemnity claims and private insurer average ALAE per indemnity claim. (The ALAE projection excludes MCCP costs, which are discussed separately below.) All information for the ALAE projection shown in Exhibits 5 through 10 exclude COVID-19 claims from accident years 2020 and 2021.

Exhibit 5.1 shows private insurer average paid ALAE per reported indemnity claim by accident year. Exhibit 5.2 shows private insurer ratios of paid ALAE to paid losses. Exhibit 6 shows private insurer annual ALAE severity growth percentages based on the estimated ultimate ALAE per indemnity claim. Exhibit 7 shows private insurer annual ALAE growth percentages based on ratios of incremental calendar year paid ALAE per indemnity claims inventory.

Exhibits 8.1 through 8.4 show the preliminary ALAE projection excluding MCCP costs, which is based on statewide claim and loss projections and private insurer average ALAE per indemnity claim. The projected ALAE development shown in Exhibit 8.1 is based on the latest year paid ALAE age-to-age development factor. As in the prior two pure premium rate filings, the projected paid ALAE development shown in Exhibit 8.1 reflects adjustments to paid ALAE age-to-age development for the impact of changes in claim settlement rates when the estimated claim settlement rate change for the accident year is greater than 1.5 points in absolute value.⁷

The projection shown in Exhibit 8.4 was computed using the intra-class indemnity claim frequency projections included in Item AC22-03-02 and a 1.0% ALAE severity trend selected based on the approximate average of the private insurer longer-term (2008 to 2021) and shorter-term (2017 to 2021)

⁷ See Item AC19-08-04 of the August 4, 2020 Actuarial Committee Agenda.

growth rates of (a) estimated ultimate accident year ALAE per indemnity claim (Exhibit 6) and (b) incremental paid calendar year ALAE per open indemnity claim (Exhibit 7). (The projected ALAE severity trend reflected in the September 1, 2021 Premium Rate Filing based on this approach was also 1.0%.) Given the potential impact of the pandemic on accident year 2020 ALAE costs, these trends were applied to accident years 2019 and 2021, which is consistent with the methodology for losses reflected in Item AC22-03-02.8

Effective in 2017, Senate Bill No. 1160 (SB 1160) and Assembly Bill No. 1244 (AB 1244) included several provisions related to lien filings. As discussed at prior meetings and in prior pure premium rate filings, liens incur significant LAE costs in addition to the settlement costs paid to the lien claimant. Liens are typically not filed and paid on claims until later in the claims process. As a result, while some of the impact of the reforms is already reflected in the emerging paid ALAE for accident years 2017 and later and in the ALAE development factors, a significant portion is not yet reflected. To reflect the full impact of these reforms, consistent with the September 1, 2021 Pure Premium Rate Filing, staff recommends including a separate adjustment to the projected ALAE ratio. This adjustment, which is shown in line (g) of Exhibit 8.4, is based on the estimated full impact of a 11.2% reduction in ALAE costs paid as of December 31, 2021 for accident years 2017 and 2018.¹⁰

As shown in line (h) of Exhibit 8.4, the preliminary projected ratio of ALAE (excluding MCCP) to loss based on statewide data and private insurer average ALAE costs and after reflecting the impact of SB 1160 and AB 1244 is 14.5%. (For comparison purposes, the projected ALAE excluding MCCP costs to loss ratio reflected in the September 1, 2021 Pure Premium Rate Filing was 15.9%.)

For informational purposes, the WCIRB has computed additional ALAE projections (excluding MCCP) based on alternative methodologies with underlying assumptions that differ from those reflected in Exhibits 8.1 through 8.4. Specifically, ALAE projections based on the following methodologies and using statewide data with private insurer ALAE have been included:

- Projected Ultimate ALAE per Indemnity Claim and Future Number of Indemnity Claims 2-Year Average Paid ALAE Development¹¹ – Exhibits 9.1 and 9.2
- Projected Ultimate ALAE per Indemnity Claim and Future Number of Indemnity Claims Projection Based on Accident Year 2019¹² – Exhibit 10

The ALAE projections for policies incepting between September 1, 2022 and August 31, 2023 derived based on the methodology presented in Exhibits 8.1 to 8.4 and each of the alternative ALAE projection methodologies are shown in Table 2.¹³

⁸ Given that accident years 2019 and 2021 are used in the projection of the ultimate number of indemnity claims in this approach, the premium used to determine the losses in the projected ALAE to loss ratio shown in line (b) of Exhibit 8.4 is based on the average of calendar years 2019 and 2021.

⁹ As reflected in the September 1, 2021 Pure Premium Rate Filing.

¹⁰ This approach resulted in a 60% tempering in the September 1, 2021 Pure Premium Rate Filing based on December 31, 2020 ALAE experience.

¹¹ This ALAE development approach was the basis for the September 1, 2021 Pure Premium Rate Filing.

¹² This ALAE trending approach was the basis for the September 1, 2021 Pure Premium Rate Filing.

¹³ All projections shown in Table 2 also reflect the impact of SB 1160 and AB 1244 on ALAE costs.

Table 2: Projections of ALAE (Excluding MCCP) to Loss

| ALAE Projection Method | Statewide with Private Insurer Average ALAE |
|---|---|
| April 14, 2022 Agenda Methodology | |
| Projected Ultimate ALAE per Indemnity Claim – Latest Year Adjusted Paid ALAE Development – Trend Applied to 2019 and 2021 | 14.5% |
| Alternative Methodologies | |
| Projected Ultimate ALAE per Indemnity Claim – 2-Year Average Adjusted Paid ALAE Development | 14.4% |
| Projected Ultimate ALAE per Indemnity Claim – Trend Applied to 2019 | 14.4% |

ALAE Projection - MCCP Costs

As in the last several pure premium rate filings, the projection of MCCP costs is based on a methodology analogous to that used for ALAE excluding MCCP costs and using statewide claim and MCCP cost data. All information for the MCCP cost projection shown in Exhibits 11 through 16 exclude COVID-19 claims from accident years 2020 and 2021.

Exhibit 11 shows statewide average paid MCCP per reported indemnity claim by accident year. Exhibit 12 shows statewide annual MCCP severity growth percentages based on estimated accident year ultimate MCCP costs per indemnity claim. Exhibit 13 shows statewide annual MCCP severity growth percentages based on ratios of calendar year paid MCCP costs per indemnity claims inventory.

Exhibits 14.1 and 14.2 show the preliminary projection of MCCP costs based on statewide data. As with ALAE excluding MCCP, projected MCCP development through 120 months shown in Exhibit 14.1 is based on the latest year paid MCCP age-to-age factors, while projected MCCP development after 120 months is based on the selected paid medical 120-to-ultimate development factor. If Similar to the projection of ALAE excluding MCCP costs, Exhibit 14.2 shows the projected ratio of MCCP to loss based on applying separate frequency and severity trends to the accident year 2019 and 2021 projected ultimate indemnity claim counts and ultimate MCCP per indemnity claim. A -1.0% MCCP severity trend was selected based on the approximate average rates of growth in (a) estimated ultimate accident year MCCP costs per indemnity claim from 2012 through 2021 (Exhibit 12) and (b) calendar year MCCP per indemnity claims inventory from 2009 through 2020 (Exhibit 13). (The projected MCCP severity trend reflected in the September 1, 2021 Premium Rate Filing based on this approach was also -1.0%.) The preliminary projected ratio of MCCP to loss based on this methodology is 3.7%. (For comparison purposes, the projected MCCP to loss ratio reflected in the September 1, 2021 Pure Premium Rate Filing was 3.9%.)

For informational purposes, the WCIRB has computed additional MCCP cost projections based on alternative methodologies with underlying assumptions that differ from those reflected in the MCCP projection methodology described above. Specifically, MCCP cost projections based on the following methodologies have been included:

- 1. Projected Ultimate MCCP per Indemnity Claim and Future Number of Indemnity Claims Two-Year Average Paid MCCP Development¹⁵ Exhibit 15
- Projected Ultimate MCCP per Indemnity Claim and Future Number of Indemnity Claims Projection Based on 2019¹⁶ – Exhibit 16

¹⁴ See Exhibit 2.6.1 of Item AC22-03-02.

¹⁵ This MCCP development approach was the basis for the September 1, 2021 Pure Premium Rate Filing.

¹⁶ This MCCP trending approach was the basis for the September 1, 2021 Pure Premium Rate Filing.

The MCCP cost projections for policies incepting between September 1, 2022 and August 31, 2023 derived based on the methodology presented in Exhibits 14.1 and 14.2 and each of the alternative MCCP projection methodologies are shown in Table 3.

Table 3: Projections of MCCP to Loss

| MCCP Projection Method | Statewide MCCP Ratio |
|--|----------------------|
| April 15, 2021 Agenda Methodology | |
| Projected Ultimate MCCP per Indemnity Claim – Latest Year Paid MCCP Development – Trend Applied to 2019 and 2021 | 3.7% |
| Alternative Methodologies | |
| Projected Ultimate MCCP per Indemnity Claim – Two-Year Average Paid MCCP Development | 3.6% |
| Projected Ultimate MCCP per Indemnity Claim – Trend Applied to 2019 | 3.6% |

The total preliminary ratio of LAE to losses for policies incepting between September 1, 2022 and August 31, 2023 based on data evaluated as of December 31, 2021 and the projection methodologies described above is 32.9%. For comparison purposes, the projected total LAE to loss ratio reflected in the September 1, 2021 Pure Premium Rate Filing was 33.4%.

^[1] Medical Cost Containment Program (MCCP) costs on claims covered by policies incepting prior to July 1, 2010 are considered medical loss; those on claims covered by policies incepting July 1, 2010 and beyond are considered allocated loss adjustment expenses.

^[2] 2012 figure includes a one-time adjustment made by State Compensation Insurance Fund to reallocate liabilities related to pension benefits.

^{[3] 2013} and 2014 ratios included information submitted by several large national insurers to more appropriately reflect ULAE costs related to deductible policies and third party administrators.

^[4] Reflects adjustments based on the Expense Call for ULAE costs related to deductible policies and third-party administrators. 2015 adjusted ratio is based on apportioning adjusted countrywide paid ULAE to California using paid losses. 2016 to 2020 adjusted ratios are based on apportioning adjusted countrywide paid ULAE to California using open indemnity claim counts.

Calendar Year ULAE Paid per Open Indemnity Claim - Private Insurers

Notes:

Source: WCIRB expense calls and quarterly calls for experience.

Calendar year ULAE paid is based on WCIRB expense calls. All figures in each calendar year contain information from the same combination of private insurers that submitted both the ULAE and claim count data for that calendar year. Therefore, each calendar year may contain a different mix of private insurers.

^{[2],[3]} Based on WCIRB accident year experience calls. Column (3) is for information only.

^[4] Column (1) / Column (2) x 1,000,000.

^{[5] 2013} and 2014 paid ULAE included information submitted by several large national insurers to more appropriately reflect ULAE costs related to deductible policies and third party administrators.

^[6] Reflects adjustments for ULAE costs related to deductible policies and third-party administrators based on the Expense Call. 2015 paid ULAE is based on apportioning adjusted countrywide paid ULAE to California using paid losses. 2016 to 2020 paid ULAE are based on apportioning adjusted countrywide paid ULAE to California using open indemnity claim counts.

- [1] See Exhibit 3.1.
- [2] See Exhibit 3.2.
- [3] Column (1) Column (3) for 12/31/2020 and Column (2) Column (4) for 12/31/2021.
- [4] 1.0 minus ratio of Column (6) claim opening rate for accident year YYYY at 12/31/2021 to Column (5) claim opening rate for accident year YYYY at 12/31/2020.
- [5] Estimated based on number of reported indemnity claims (excluding COVID-19 claims) as of December 31, 2021 (Column (8)) and selected reporting pattern on Column (2).
- [6] Estimated based on applying projected frequency trends to accident year 2019. Frequency trends for 2020 and 2021 are the actual trends adjusted for class mix and wage level (see Exhibit 12 of Agenda Item AC21-03-02), 2022 and 2023 estimated frequency trends are based on the projected growth in intra-class indemnity claim frequency (see Exhibit 6.1 of Agenda Item AC22-03-02).

Ult. ALAE per

14.5%

- [1] All paid ALAE exclude the paid cost of medical cost containment programs.
- [2] Based on the latest year indemnity claim count age-to-age development from Exhibit 8.3.
- [3] Based on estimated ultimate ALAE per indemnity for private insurers from Exhibit 6.
- [4] AY2020 and AY2021 data excluded COVID-19 claims.
- [5] Estimated based on projected frequency trends for accident years 2021 to 2024. The 2021 frequency trend is the actual trend adjusted for class mix and wage level (see Item AC22-03-02, Exhibit 12), and 2022 to 2024 estimated frequency trends are based on the projected growth in intra-class indemnity claim frequency (see Item AC22-03-02, Exhibit 6.1). These frequency trends were then applied to the accident year 2019 and 2021 ultimate indemnity claim counts.
- [6] Severities are projected by applying an annual growth rate of 1.0%, which is based on the approximate average of the private insurers selected rate of growth in (i) estimated ultimate accident year ALAE severities from Exhibit 6 and (ii) paid ALAE per open indemnity claim from Exhibit 7, to the average of 2019 and 2021 ultimate ALAE severity.
- [7] Column(3) x Column(4) / 1,000.
- [8] Based on the reported earned premium for calendar year 2019 and 2021 from the same group of insurers that reported the paid ALAE in column (1) and the indemnity claim counts in column (4) by accident year as of December 31, 2021.
- [9] See Exhibit 8 of Item AC22-03-02.
- [10] See Exhibit 5.2 of Item AC22-03-02.
- [11] Based on the WCIRB's most recent evaluation of SB 1160 and AB 1244 reflecting a 70% reduction in lien fillings, offset by 75% to reflect the impact of the reforms in the emerging ALAE data.

- [1] All paid ALAE exclude the paid cost of medical cost containment programs.
- [2] Based on the latest year indemnity claim count age-to-age development from Exhibit 8.3.
- [3] Based on estimated ultimate ALAE per indemnity for private insurers from Exhibit 9.1.
- [4] AY2020 and AY2021 data excluded COVID-19 claims.
- [5] Estimated based on projected frequency trends for accident years 2021 to 2024. The 2021 frequency trend is the actual trend adjusted for class mix and wage level (see Item AC22-03-02, Exhibit 12), and 2022 to 2024 estimated frequency trends are based on the projected growth in intra-class indemnity claim frequency (see Item AC22-03-02, Exhibit 6.1). These frequency trends were then applied to the accident year 2019 and 2021 ultimate indemnity claim counts.
- [6] Severities are projected by applying an annual growth rate of 1.0%, which is based on the approximate average of the private insurers selected rate of growth in (i) estimated ultimate accident year ALAE severities from Exhibit 6 and (ii) paid ALAE per open indemnity claim from Exhibit 7, to the average of 2019 and 2021 ultimate ALAE severity.
- [7] Column(3) x Column(4) / 1,000.
- [8] Based on the reported earned premium for calendar year 2019 and 2021 from the same group of insurers that reported the paid ALAE in column (1) and the indemnity claim counts in column (4) by accident year as of December 31, 2021.
- [9] See Exhibit 8 of Item AC22-03-02.
- [10] See Exhibit 5.2 of Item AC22-03-02.
- [11] Based on the WCIRB's most recent evaluation of SB 1160 and AB 1244 reflecting a 70% reduction in lien fillings, offset by 75% to reflect the impact of the reforms in the emerging ALAE data.

Projected Ratio of ALAE^[1] to Losses - Statewide

Based on Private Insurers ALAE Severity using Latest Year Paid ALAE Development Adjusted for Changes in Claim Settlement Rates - Trend Applied to 2019 for Policies with Effective Dates between September 1, 2022 and August 31, 2023

| (f) Projected Ratio o | f MCCP to Losses: (a)/(e) | | 3.7% |

- [1] Based on latest year paid MCCP development through 120 months from Exhibit 14.2. 120-to-ultimate development factor is based on selected paid medical development factors from Exhibit 3.2 of Agenda Item AC22-03-02.
- [2] Based on the latest year indemnity claim count age-to-age development from Exhibit 8.3.
- [3] Estimated based on projected frequency trends for accident years 2021 to 2024. The 2021 frequency trend is the actual trend adjusted for class mix and wage level (see Item AC22-03-02, Exhibit 12), and 2022 to 2024 estimated frequency trends are based on the projected growth in intra-class indemnity claim frequency (see Item AC22-03-02, Exhibit 6.1). These frequency trends were then applied to the accident year 2019 and 2021 ultimate indemnity claim counts.
- [4] Severity is projected by applying an annual growth rate of -1.0% based on the average of the longer-term average rates of growth in ultimate MCCP per indemnity claim from Exhibit 12 and calendar year MCCP paid per open claim from Exhibit 13 to the ultimate MCCP severity estimated from averaging 2019 and 2021.
- [5] Column(6) x Column(7) / 1,000.
- [6] Based on the reported earned premium for calendar year 2019 and 2021 from the same group of insurers that reported the paid MCCP in column (1) and the indemnity claim counts in column (4) by accident year as of December 31, 2021.
- [7] See Exhibit 8 of Agenda Item AC22-03-02
- [8] See Exhibit 5.2 of Agenda Item AC22-03-02.

Projected Ratio of MCCP to Losses - Statewide

| (f) Projected Ratio of | MCCP to Losses: (a)/(e) | | 3.6% |

Notes:

- [1] Based on latest year paid MCCP development through 120 months from Exhibit 14.2. 120-to-ultimate development factor is based on selected paid medical development factors from Exhibit 3.2 of Agenda Item AC22-03-02.
- [2] Based on the latest year indemnity claim count age-to-age development from Exhibit 8.3.
- [3] Estimated based on projected frequency trends for accident years 2021 to 2024. The 2021 frequency trend is the actual trend adjusted for class mix and wage level (see Item AC22-03-02, Exhibit 12), and 2022 to 2024 estimated frequency trends are based on the projected growth in intra-class indemnity claim frequency (see Item AC22-03-02, Exhibit 6.1). These frequency trends were then applied to the accident year 2019 ultimate indemnity claim counts.
- ^[4] Severity is projected by applying an annual growth rate of -1.0% based on the average of the longer-term average rates of growth in ultimate MCCP per indemnity claim from Exhibit 12 and calendar year MCCP paid per open claim from Exhibit 13 to the 2019 ultimate MCCP severity.
- [5] Column(6) x Column(7) / 1,000.
- [6] Based on the reported earned premium for calendar year 2019 from the same group of insurers that reported the paid MCCP in column (1) and the indemnity claim counts in column (4) by accident year as of December 31, 2021.
- [7] See Exhibit 8 of Agenda Item AC22-03-02
- [8] See Exhibit 5.2 of Agenda Item AC22-03-02.

Item AC22-04-02 9/1/2022 Filing – Review of Alternative Loss Projection Methodologies

For a number of years, the WCIRB has included alternative loss development and trending methodology projections in its pure premium rate filing submissions.

Loss Development Methodologies

The loss development projections based on the methodology reflected in the summary analysis of December 31, 2021 experience, included in Item AC22-03-02, includes a combination of latest year reform-adjusted¹ paid loss development factors through 108 months with adjustments for changes in claim settlement rates applied through 84 months and three-year average reform-adjusted paid loss development factors after 108 months with adjustments for the impact of changes in claim settlement rates on the loss development tail. Included for the Committee's review are a number of alternative loss development projections based on methodologies that have been included, for informational purposes, in prior pure premium rate filing materials or have been discussed at prior meetings. Specifically, alternative loss ratio projections, based on December 31, 2021 experience, derived using the following loss development methodologies and the trending methodology reflected in the analysis included in Item AC22-03-02 are included:²

- 1. Three-Year Average Unadjusted Incurred Loss Development Exhibits 1.1 through 1.3
- 2. Latest Year Unadjusted Incurred Loss Development Exhibits 2.1 through 2.3
- 3. Three-Year Average Incurred Loss Development Adjusted for Changes in Case Reserve Levels Exhibits 3.1 through 3.11
- 4. Three-Year Average Unadjusted Paid Loss Development Exhibits 4.1 through 4.3
- 5. Latest Year Unadjusted Paid Loss Development Exhibits 5.1 through 5.3
- 6. Latest Year Paid Loss Development Adjusted for Reforms Exhibits 6.1 and 6.2
- 7. Three-Year Average Paid Loss Development Adjusted for Changes in Claim Settlement Rates and Reforms Exhibits 7.1 through 7.3
- 8. Two-Year Average Paid Loss Development Adjusted for Changes in Claim Settlement Rates and Reforms³ Exhibits 8.1 through 8.3

A summary of the preliminary loss ratios projected for policies incepting between September 1, 2022 and August 31, 2023 based on the alternative loss development methodologies described above is shown in Table 1.

¹ These include adjustments for the provisions of Senate Bill No. 1160 (SB 1160) related to lien filings, adjustments for the decreases in pharmaceutical costs through 2018, and adjustments for the changes to medical fee schedules in 2021.

² All paid loss development methodologies reflect three-year average loss development factors applied after 108 months and all incurred loss development methodologies reflect six-year average incurred loss development factors applied after 108 months.

³ This loss development methodology was the basis of the September 1, 2021 Pure Premium Rate Filing projection.

Trending Methodologies

The trending projections reflected in the summary analysis of December 31, 2021 experience, included in Item AC22-03-02, are based on separate projections of claim frequency and claim severity growth applied to the 2019 and 2021 on-level loss ratios. The claim frequency growth estimates are based on the preliminary actual frequency change based on partial year unit statistical data for accident year 2020, the average of the preliminary actual 12-month frequency change and indemnity claim frequency model projection for accident year 2021, and the indemnity claim frequency model projections for accident years 2022 through 2024. The indemnity claim frequency model projections reflect the refinements discussed at the December 9, 2021 and March 21, 2022 meetings, including the forecast of the cumulative injury index (CII) and the indicated full frequency model constant term. The average annual severity growth estimates are 1.0% for indemnity and 1.0% for medical, which are based on a review of short-term and long-term growth in claim severities.

Attached for the Committee's review are a number of alternative trending projections based on methodologies that have been included, for informational purposes, in prior advisory pure premium rate filing materials or have been discussed at prior meetings. Specifically, alternative loss ratio projections, based on December 31, 2021 experience, derived using the loss development methodologies reflected in the analysis included in Item AC22-03-02 and the following trending methodologies have been included:⁴

1. Separate Projections of Frequency and Severity Growth Applied to the Latest Two Years (2020 and 2021) – Exhibits 9.1 and 9.2

⁴ All frequency and severity projections are based on those included in Item AC22-03-02 and described above unless otherwise specified.

- 2. Separate Projections of Frequency and Severity Growth Applied to the Latest Year (2021) Exhibits 10.1 and 10.2
- 3. Separate Projections of Frequency and Severity Growth Applied to 2019⁵ Exhibits 11.1 and 11.2
- 4. Separate Projections of Frequency (Frequency Model Projections with No Forecast Change in the CII and using a Tempered Frequency Constant Term)⁶ and Severity Growth Applied to 2019 and 2021 Exhibits 12.1 and 12.2
- 5. Separate Projections of Frequency and the Long-Term (1990 to 2021) Average Annual Severity Growth Applied to 2019 and 2021 Exhibits 13.1 and 13.2
- 6. Separate Projections of Frequency and the Short-Term (2017 to 2021) Average Annual Severity Growth Applied to 2019 and 2021 Exhibits 14.1 and 14.2
- 7. Long-Term (1990 to 2021) On-Level Loss Ratio Exponential Trend Applied to 2019 and 2021 Exhibits 15.1 and 15.2
- 8. Short-Term (2017 to 2021) On-Level Loss Ratio Exponential Trend Applied to 2019 and 2021 Exhibits 16.1 and 16.2

A summary of the preliminary loss ratios projected for policies incepting between September 1, 2022 to August 31, 2023 based on the alternative trending methodologies is shown in Table 2.

⁵ In the September 1, 2021 Pure Premium Rate Filing, the separate frequency and severity trends were applied to 2019 only. ⁶ This methodology was generally the basis of the frequency model projections reflected in the September 1, 2021 Pure Premium Rate Filing. It includes other updates to the frequency model discussed at the December 9, 2021 meeting such as using a non-leading indemnity benefit variable that does not reflect cost-of-living adjustments to indemnity benefit levels.

Table 2: Projected Loss Ratios Based on Alternative Trending Methodologies

| Trending Methodologies | Indemnity Loss Ratio | Medical Loss Ratio | Total Loss Ratio |
|--|-------------------------|-----------------------|---------------------|
| April 14, 2022 Agenda Methodology | | | |
| Separate Projections of Frequency (w/ CII Forecast) and Severity (1.0% Indemnity; 1.0% Medical) Applied to 2019 and 2021 | | 0.291 | 0.568 |
| Alternative Methodologies | | | |
| Separate Projections of Frequency and Severity Applied to 2020 and 2021 | 0.278 | 0.289 | 0.567 |
| Separate Projections of Frequency and Severity Applied to 2021 | 0.282 | 0.293 | 0.575 |
| Separate Projections of Frequency and Severity Applied to 2019 | 0.271 | 0.289 | 0.560 |
| Separate Projections of Frequency (Frequency Model Projection w/o CII Forecast) and Severity Applied to 2019 and 2021 | 0.295 | 0.310 | 0.605 |
| Separate Projections of Frequency and Long-Term (1990 to 2021) Severity Applied to 2019 and 2021 | 0.276 | 0.328 | 0.604 |
| Separate Projections of Frequency and Short-Term (2017 to 2021) Severity Applied to 2019 and 2021 | 0.286 | 0.295 | 0.581 |
| Long-Term (1990 to 2021) On-level Loss Ratio Exponential Trend Applied to 2019 and 2021 | 0.280 | 0.335 | 0.615 |
| Short-Term (2017 to 2021) On-level Loss Ratio Exponential Trend Applied to 2019 and 2021 | 0.299 | 0.307 | 0.606 |

- (a) See Exhibit 2.1.
- (b) Based on AC22-04-02, Exhibit 4.1.
- (c) See AC22-04-02, Exhibit 5.2.
- (d) The trending projection is based on frequency and severity growth separately applied to the 2019 and 2021 on-level ratios. The frequency growth estimates are based on the actual frequency change for accident year 2020, the average of the actual 12-month frequency change and frequency model projection for accident year 2021 from AC22-04-02, Exhibit 12, and frequency model projections for accident years 2022 through 2024 from Item AC22-04-02, Exhibit 6.1. The annual indemnity severity growth estimates are from AC22-04-02, Exhibit 6.2.

⁽a) Latest evaluation of each accident year is unadjusted. Evaluations prior to the latest evaluation are determined by adjusting the latest accident year average indemnity case reserves by a different annual change applied at each individual accident year and maturity based on the change in paid losses per closed claim for that age and maturity (Item C)

⁽b) Each amount is derived as the product of the indemnity open claim counts (Item E) and the adjusted average indemnity case reserves per open claim (Item D).

⁽c) Latest evaluation of each accident year is unadjusted. Evaluations prior to the latest evaluation are determined by adjusting the latest accident year average medical case reserves by a different annual change applied at each individual accident year and maturity based on the change in paid losses per closed claim for that age and maturity (Item C)

⁽d) Each amount is derived as the product of the indemnity open claim counts (Exhibit 3.2, Item E) and the adjusted average medical case reserves per open claim (Item D).

Source: Accident year experience of insurers with available claim count data, excluding COVID-19 claims.

- (a) See Exhibit 7.1.
- (b) Based on AC22-04-02, Exhibit 4.1.
- (c) See AC22-04-02, Exhibit 5.2.
- (d) The trending projection is based on frequency and severity growth separately applied to the 2019 and 2021 on-level ratios. The frequency growth estimates are based on the actual frequency change for accident year 2020, the average of the actual 12-month frequency change and frequency model projection for accident year 2021 from AC22-04-02, Exhibit 12, and frequency model projections for accident years 2022 through 2024 from Item AC22-04-02, Exhibit 6.1. The annual indemnity severity growth estimates are from AC22-04-02, Exhibit 6.2.

⁽a) Based on AC22-04-02, Exhibit 1. Accident years 2011 and subsequent do not reflect the paid cost of medical cost containment programs (MCCP). Accident years 2010 and prior do reflect paid MCCP costs.

⁽b) Age-to-age factors are selected as two-year averages for the 12-to-24 month through 96-to-108 month factors and three-year average for the subsequent age-to-age factors based on AC22-04-02, Exhibit 2.5. Age-to-age factors for developing accident years 2016 to 2021 were adjusted for changes in claim settlement rates based on two-year average selections (see AC22-04-02, Exhibit 2.5.8, Item Q).

⁽c) See AC22-04-02, Exhibit 3.2, Column (2).

⁽d) Based on AC22-04-02, Exhibits 2.6.1 and includes adjustments for SB 1160 and recent pharmaceutical cost declines. Age-to-age factors for developing accident years 2016 to 2021 were adjusted for changes in claim settlement rates based on latest year selections (see AC22-04-02, Exhibit 2.6.8, Item R).

Item AC22-04-03 9/1/2022 Filing – COVID-19 Claim Cost Projection

The WCIRB's January 1, 2021 Pure Premium Rate Filing reflected an average provision for COVID-19 claims of 4%, or \$0.06 per \$100 of payroll, that was based on the projected cost of COVID-19 claims to be incurred on 2021 policies. Exhibit 1 compares COVID-19 losses and loss adjustment expenses (LAE) projected in the January 1, 2021 Pure Premium Rate Filing to the COVID-19 losses and LAE estimated to have emerged based on reported aggregate financial data reported through December 31, 2021.

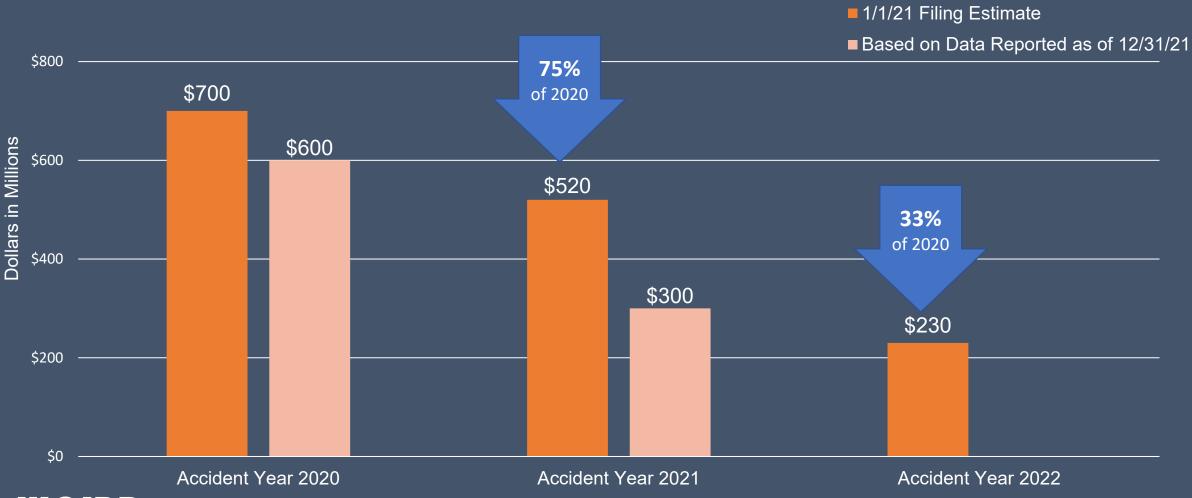

At the March 16, 2021 and April 15, 2021 meetings, the Committee reviewed the methodology used to develop the COVID-19 claim cost projection reflected in the January 1, 2021 Pure Premium Rate Filing as well as emerging COVID-19 claim experience. The Committee also discussed the information currently available on projections of future COVID-19 rates. The models reviewed at the time suggested that with growing levels of vaccination, COVID-19 infection, hospital and death rates would plateau before significant levels of exposure on post-September 1, 2021 policies would arise. As a result, the Committee agreed that no COVID-19 claim cost provision for the September 1, 2021 to August 30, 2022 policy period should be reflected in the September 1, 2021 Pure Premium Rate Filing. However, since the time that filing was made in April 2021, significant levels of COVID-19 claims have continued to arise in large part due to the emergence of the Delta and Omicron variants.

A summary of updated COVID-19 claim information will be presented at the meeting.

_

¹ In the Insurance Commissioner's Decision on the Filing, the approved advisory pure premium rates did not reflect a provision for projected COVID-19 claim costs on 2021 policies, his Decision indicated that, "[t]he WCIRB's thorough efforts to estimate COVID-19 costs are noted and appreciated but I am not persuaded that there is sufficient and reliable data upon which to base an adjustment for COVID-19 costs. Insurance companies are encouraged to take under advisement the actuarial analyses provided in the proposed decision as well as ongoing developments when evaluating whether and to what extent an adjustment for the costs of COVID-19 should be incorporated into a given insurer's rate filing." The Proposed Decision includes a *Table of Recommended COVID-19 Additive Adjustment per \$100 of Payroll* that average \$0.05 per \$100 of payroll.

Projected Cost of COVID-19 Claims 1/1/21 Filing Vs Estimated Actual — Insured Employers Only

Item AC22-04-04 Retrospective Evaluation of the 2021 Fee Schedule Changes

In early 2021, the Division of Workers' Compensation (DWC) adopted changes to two fee schedules, including the Evaluation/Management (E/M) section of the Official Medical Fee Schedule effective March 1, 2021 and the new Medical-Legal Fee Schedule effective April 1, 2021. In April 2021, the WCIRB conducted prospective evaluations of the fee schedule changes and estimated an increase of 15% to the E/M office visit costs and an increase of 22% to the cost of medical-legal services. The cost impacts of both fee schedule changes were reflected in the September 1, 2021 Advisory Pure Premium Rate Filing.

Staff has conducted a retrospective cost impact evaluation of the E/M and Medical-Legal fee schedule changes based on actual payments in 2021 reported in the WCIRB medical transaction data and will present the results of this evaluation at the meeting. Slides summarizing staff's retrospective evaluation are attached.

Background on 2021 Official Medical Fee Schedule (OMFS) Adjustments to Evaluation and Management Services

- The Division of Workers' Compensation (DWC) adopted changes to reimbursement allowance made by the Centers for Medicare & Medicaid Services (CMS) for Evaluation/Management (E/M) services effective March 1, 2021.
- Some of the significant changes to the E/M Section of the OMFS include the following:
 - Updated relative value units (RVU)
 - Updated conversion factors
 - Updated telehealth list
 - Altered the way providers bill for E/M service
 - 1995 and 1997 E/M Documentation Guidelines are no longer used
 - Code change: eliminated 99201 and adopted G2212
 - Determination of the level of E/M service (via time or medical decision making)
- In April 2021, the WCIRB conducted a prospective evaluation of the cost impact of increased reimbursement allowance for E/M office/outpatient visit services and estimated an increase of 15%* to the E/M office visit costs. The cost impact was reflected in the September 1, 2021 Advisory Pure Premium Rate Filing.
- The WCIRB has conducted a retrospective evaluation of the cost impact of the changes to the E/M service reimbursement allowance based on actual payment patterns.

Data Source and Summary of Key Preliminary Findings

As of February 28, 2022

Data Source

- Based on WCIRB medical transaction data for service years 2019 to 2021
 - Focused on E/M office visit services between March and December for each service year
 - COVID-19 claims were excluded

Key Preliminary Findings

- Average paid per E/M office visit transaction increased by 10%* in 2021 compared to 2019, slightly lower than the projected increase of 15%
- Mix of E/M office services remained similar in 2021 compared to 2019, but the network discounting appeared to be larger in 2021

■ Number of E/M office visits per claim increased by 4% in 2021, likely not related to the March 1, 2021 fee schedule

Source: WCIRB medical transaction data (COVID-19 claims excluded)

Background on New Medical-Legal Fee Schedule

- The Division of Workers' Compensation (DWC) adopted significant changes to the Medical-Legal (ML) Fee Schedule
 effective April 1, 2021.
- The new ML Fee Schedule is intended to increase the reimbursement allowance for medical-legal reports while eliminating complexity factor overlay onto reimbursement allowances.
- In April 2021, the WCIRB conducted a prospective evaluation of the cost impact of new ML Fee Schedule and estimated an increase of 22% to the medical-legal costs. The cost impact was reflected in the September 1, 2021 Advisory Pure Premium Rate Filing.
- The WCIRB has conducted a retrospective cost impact evaluation of the new ML Fee Schedule based on the actual payments in 2021.

April 1, 2021 ML Fee Schedule – Summary of Key Changes

- Increases fees for relative value (RV) from \$12.5 to \$16.25
- Adds a reimbursement allowance for missed appointments
- Changes to modifiers
 - Agreed Medical Evaluator (AME), interpreter, psychologist/psychiatrist, toxicologist and oncologist ML services
- Replaces the time component in the ML evaluation codes (old ML101, ML104 and ML106) with a separate record review procedure code for complexity factor
- Adds a ML code for sub rosa recordings review

| Pre-4/1/21 ML Code | New ML Code | Procedure Description | | |
|-----------------------|----------------|--|--|--|
| ML100 | ML200 | Missed Appointment for a Comprehensive or Follow-Up Medical-Legal Evaluation | | |
| ML102 | | | | |
| ML103 | ML201 | Comprehensive Medical-Legal Evaluation | | |
| ML104 | | | | |
| ML101 | ML202 | Follow-up Medical-Legal Evaluation | | |
| ML106 | ML203 | Fees for Supplemental Medical-legal Evaluations | | |
| ML105 | ML204 | Fees for Medical-Legal Testimony | | |
| | ML205 | Fees for Review of Sub Rosa Recordings | | |
| | MLPRR | Record Review (applicable to ML200-ML203) | | |

Data Source and Summary of Key Preliminary Findings

Data Source

- Based on the WCIRB medical transaction data from service year 2018 through 2021
- Compared ML services provided from Q2 through Q4 of 2021 to those in 2019
- COVID-19 claims were excluded

Key Preliminary Findings

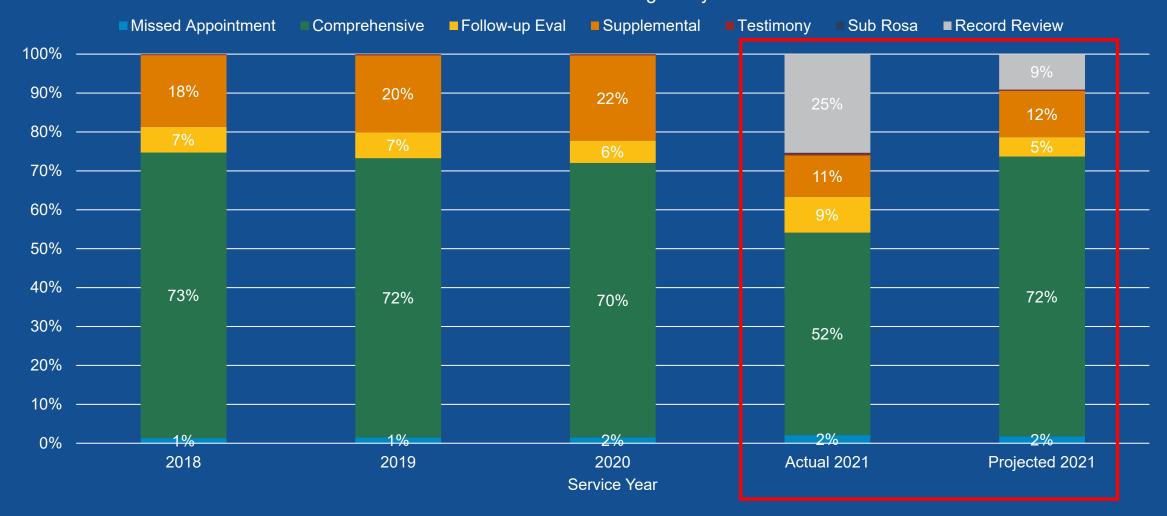

- Under the new ML Fee Schedule, ML payment per claim in 2021 was 39% higher than in 2019. The actual cost impact is higher than the projected (+22%).
 - Record review appears to be a key cost driver (25% of 2021 ML payments, higher than projected 9%)
- Including record review, paid per ML service increased by 38% in 2021 compared to those in 2019
- Overall, number of ML services per claim remained the same in 2021
 - Number of follow-up evaluations per claim increased significantly, while the number of comprehensive and supplemental evaluations decreased

Distribution of Payments for Medical-Legal Services (Q2 through Q4) (6.4% of payments for all 2020 medical services)

As of February 28, 2022

Percent of Total Medical-Legal Payments
